How Solar Works

Grid Connect

- 1 Photovoltaic panels convert solar energy from the sun into direct current (DC) electricity.
- 2 A Grid Tie inverter converts the DC supply into 240V alternating current (AC).
- 3 The AC supply is distributed first to your residence.
- 4 Any excess power is then returned to the grid.

A newly installed solar panel generation system is eligible for Renewable Energy Certificates which can then be traded with the energy provider. Meaning \$\$\$ in your pocket.
