

What we do...

I reckon everyone knows our name already - we've all said it or thought it at some point in time because our technology, our computers and software, have let us down.

It is for this reason ***i hate my pc*** will focus on making computers work for people rather than it being the other way around.

Our mantra is **Don't hate your PC. Let us fix it so you can get on with the fun stuff.** It is a bit like letting us hate your computer for you :-)

i hate my pc will provide:

- ***troubleshooting*** and ***problem support*** - windows, printers, programs, scanners, web-cams, digital cameras, broadband, internet, home networks, wireless networks, security etc.
- ***computer buying assistance*** - don't know what to buy? Need to buy a PC for someone else but don't have time?
- ***preventative maintenance*** - an ounce of prevention
- ***data backup solutions*** - because sooner or later you'll need them
- ***security solutions*** - keep your stuff private
- One on one ***tuition*** and ***training*** - help with doing it yourself
- Basic ***web site set up*** - getting a domain name, hosting your web site, something nice to get you started with
- Other ***home technology support*** - connecting your computer to your home theatre etc.
- ...and help with just about anything else that your PC may be doing to you.

i hate my pc will focus on cost effective and people oriented solutions.

virtual vouchers are available. For example, you can buy some support for Mum and Dad's new PC so you don't have to be on call ;-)

We have a loyalty program so make sure your friends and family tell me that they heard about us from you!

We hope to hear from you soon.
