## Blocked Drains

- **Blocked Drains. No matter the time or day, Hogans Plumbing can have a plumber with you within an hour to fix your blocked drain.**

If you are experiencing slow drainage of your sink or toilet, bubbling or gurgling sounds, or odour associated with sewage then give us a call immediately. They could all be indicators of a blocked sewage system and any delays could potentially be costly.

Blocked drains can be caused by a variety of factors including:

## **Foreign Objects**

Drainpipes can become congested through a build up of items like hair, food waste and soap. Initially this may only slightly affect water flow but over time they will become blocked. In the bathroom this may occur due to the flushing of excess toilet paper and sanitary products down the toilet. Regardless of the location, allowing these minor blockages to remain untreated may result in greater hassles and expense in the future.

## **Rain or Storms**

During heavy storms drains often become blocked due to the increased volume of water. Drains are generally not designed for this increase and the likelihood of blockages increases dramatically. They are capable of dealing with your regular usage but extreme weather puts them under increased pressure. Outdoor drains are susceptible to a buildup of debris during heavy rain or storms. Leaves, dirt and rubbish can collect and cause the drains to block. If unattended these blockages can lead to flooding and property damage.

## **Broken Pipes**

Broken pipes can occur due to intrusions (by tree roots), poor installation, building work, shifting soil and general wear and tear. Regardless of the cause, broken pipes can be disruptive and costly depending on their location. Drain cameras can be used to determine the exact location of the breakage from above ground and reduce the need to replace the entire drain. Depending on the extent of the blockage/damage this may still have to occur.

## **Incorrect Installation**

The recent explosion of DIY culture has been met by the increase in incorrectly installed plumbing and draining pipes. The initial savings of DIY are offset by the longer term repair costs. Incorrect installation can result in misalignment or complete collapse. Not only are these causes of blocked drains but also very costly mistakes. They have the potential to cause damage to not only your own but also your neighbours' properties.

## Hot Water System

**Is your hot water heater leaking? No hot water? Or Do you want to Replace Hot Water Heater Or Need new one?**
