

Gas Safety Check

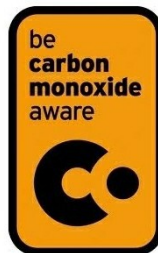

How safe are your gas appliances? Did you know that a faulty, incorrectly installed or poorly maintained appliance can produce carbon monoxide, which is a colourless, odourless, highly toxic gas. Inhalation can cause nausea, headaches, disorientation and can prove to be fatal.

Simple checks and regular servicing carried out by a Licensed Gas Service Technician will ensure that your appliances operate safely and efficiently and could save the lives of those living in your property.

For your safety and peace of mind Yeoman Plumbing offers a full gas safety check from as little as \$55.

Upon completion of your inspection we provide a safety certificate, should any faults be identified we will recommend corrective action and a no obligation quote to rectify. We have a number of years of experience in gas safety and we are here to help in providing this valuable service.

Please contact us for further information or to arrange an appointment.

Carbon monoxide poisoning is the leading cause of poisoning deaths in the world
