

At Nuthaburra Stone we know it is really annoying to pay good money for a load of wall stone only to throw half of it out because it is rubbish. You are given no compensation for the rubbish, you have to pay for another load, there goes the profit and to add insult to injury you get a free oil container or drink bottle mixed in for your trouble. It makes it very hard to price a job and make money out of it if you are unsure of the quantity and quality of the product you receive from your supplier.

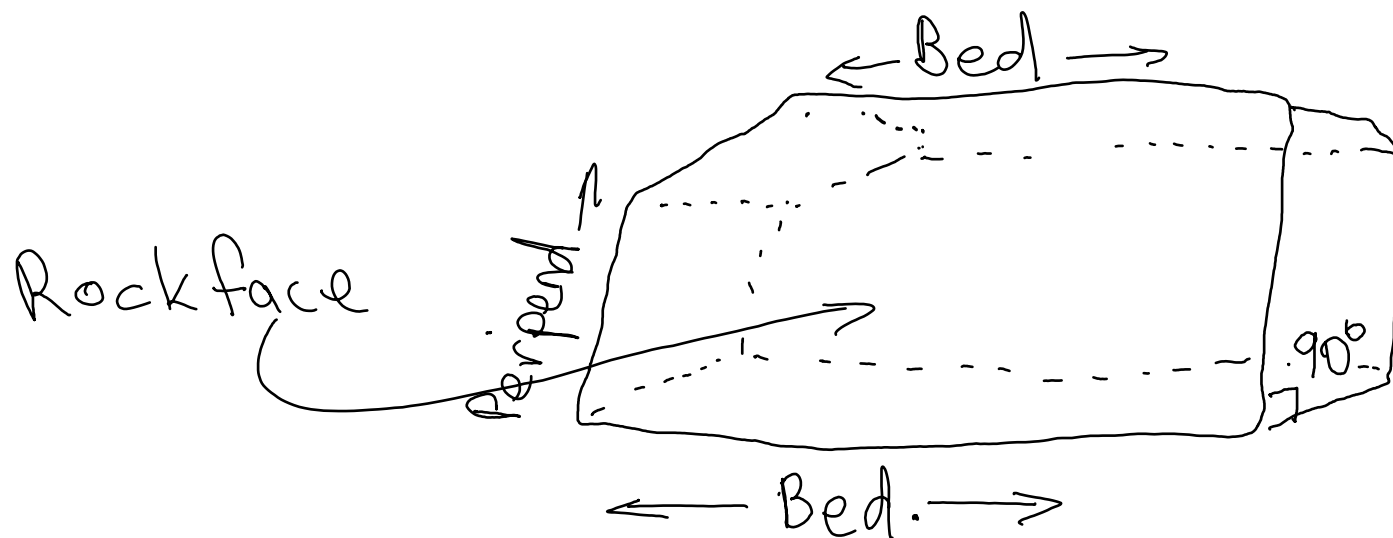

Do you know the feeling of being taken for granted by your supplier?

We offer the following to our valuable customers.

**Ready split and hand selected stone with no rubbish mixed in the load.** If you have stone left over you won't want to throw it away it'll be too good for that.

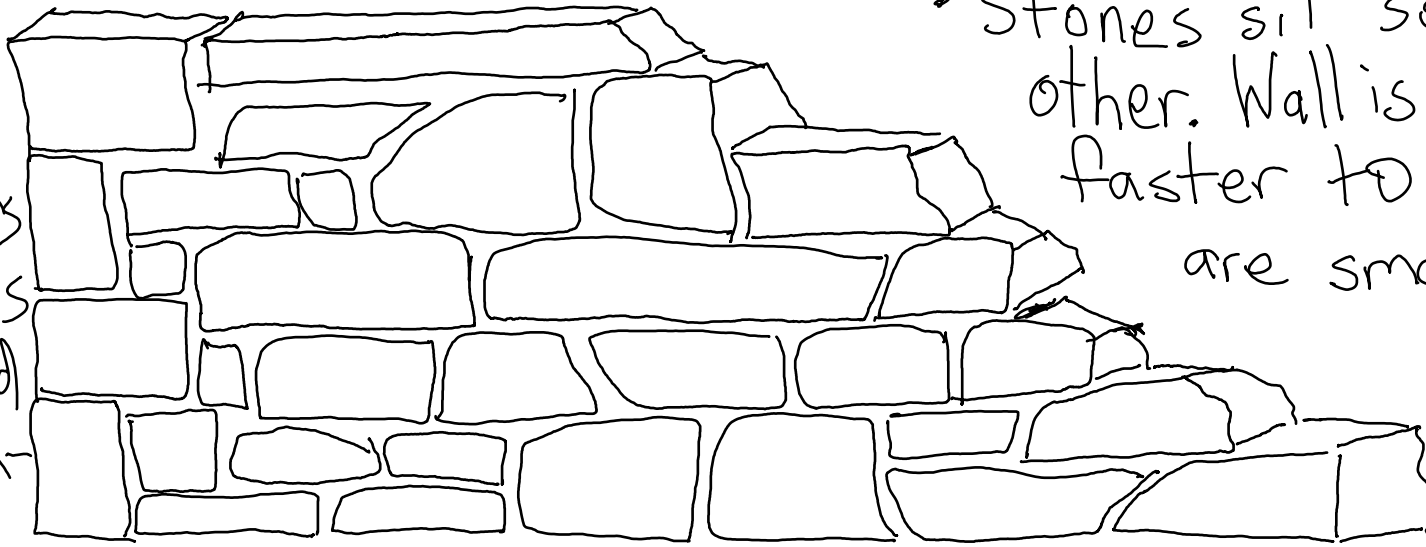

**High quality easy to lay stone.** 90 degree cleavage between face and bed. Even with irregularly shaped stones the bed surface will be at right angles to the face of the rock which means 5 things:

1. The rock above sits square on the rocks below while the face lines up with the stringline above. Accuracy is improved.
2. The stones can be laid much faster enabling you to lay more square metres of wall in a day.
3. The joints are much smaller which means the stone becomes the feature rather than the mortar. This completely transforms the appearance of your workmanship and your reputation.
4. Cross bonding of perpendicular joints by horizontal stones is easy to achieve.
5. The resulting structure is much stronger than anything you have built before.

• A typical stone unit from our factory showing 90° cleavage Bed to Rockface.

- Easy to lay cross bonded corners
- Smaller joints
- Cross bonded units throughout.

- Stones sit solid on each other. Wall is much stronger, faster to lay and joints are smaller.

**Do you want to select the stone yourself?** We're sure you won't have to do that but if you really feel the need, come in and pick through the stone yourself and load up your own ute and trailer.

**Australian stone processed right here in Queanbeyan by Australians.** We are heavily committed to retaining and passing on Stonemasonry and manufacturing knowledge for the next generation of Australians. We have a solid record and continuing program of training Stonemason Apprentices many who have gone on to form reputable companies in the Canberra region who are themselves just as committed to training young Australians.

**Good value for money.** Give us a ring and come see our beautiful stone.
