Work Cover Victoria estimates that the total cost of slip/fall injuries is around **\$1.5 billion** per year across Australia. This estimate includes all claims and injuries for medical cost and time off work.

Monash University Accident Research Centre determined that up to **81%** of slip related injury among the elderly was a direct result of low friction or wet floor surfaces.

Don't wait to become a part of these alarming statistics.....

anti-slip solutions

OUR PROVEN SOLUTIONS

GRIP GUARD is an innovative safety treatment process for tiled, stone and concrete surfaces. The treatment process makes floors significantly safer to walk on when wet. In fact, after Grip Guard treatment the surface is actually safer to walk on wet than dry.

SAFETY STAIR NOSING, suitable for residential, commercial and Industrial applications and available in a range of polymetric and carborundum finishes safety stair nosing provides a highly effective indoor or outdoor meeting or exceeding AS/NZ 1428 standards.

DURABAK this industrial surface is impervious to chemicals, is extremely resilient and environmentally friendly. Currently installed on 4 US Navy nuclear aircraft carriers, its the right choice for superior non slip solutions on most ceramic, stone and metal surfaces.

HY-TRACTION is a tough, long lasting satin surface polymer designed to provide maximum anti-slip to hard surfaces like concrete, terrazzo, travertine and marble. It's unique micro bead suspension offers an extremely high slip coefficient rating on these difficult surfaces.

PERMANENT INLAID TACTILES for the Vision Impaired, provide indicators for approaching hazards or warning for directional changes, Tactiles come in a wide range of colours, materials and profiles to suit all environments.

SAFETY FLOORING is a Marine Grade system designed to channel water away quickly, its diamond shaped nodules prevent pooling. This flooring solution is particularly effective on ramps or in a wet environment such as marine decks.

DURA GRIP PU anti-slip sealer is the ideal floor safety solution for vinyl, linoleum, rubber, epoxy, and timber floors. DuraGrip PU anti-slip sealer creates a safe pedestrian environment up to an R10 ramp rating as well as providing an attractive, hygienic, and easily maintainable floor.

EFFECTIVE ESTABLISHED TECHNOLOGIES

We have the right solution for reducing the risk of injury, OH&S claims and expensive litigation

Friction Systems Australia provides a wide range of leading edge anti-slip and safety solutions for Domestic, Commercial and Industrial surfaces. Internal or external we have the right solution.

STANDARDS AUSTRALIA

Slip resistance is rarely a priority in the design phase of construction or renovation, it is more often a consideration after the flooring is laid and the first signs of poor traction appear.

For this reason a large percentage of the works carried out by Friction Systems comes as a direct result of injury, incidents, duty of care responsibilities or OH&S concerns.

APPLICATION

Most solutions can be applied without interruption to business, however if necessary our operators can resolve your issues outside of normal working hours.

Friction Systems Australia only uses licensed fully trained floor safety experts to assess and carry out installations.

RESULTS

Friction Systems will provide test documents that identify slip resistance pre and post treatment. The document provides clients with documented evidence that floor safety and duty of care responsibilities have been addressed.
