As prescribed by Workplace & Occupational Safety and Health Regulations, the person having control of a workplace or access must ensure that the workplace is safe and inspected, tested and tagged by a competent and trained person.

## What needs to be tested and who?

Almost every item that plugs into a power point in the workplace should be included in a regular inspection program. These include but are not limited to:

- ✓ Electrical Power Tools
  - ✓ RCD's/ Safety Switches
  - ✓ Extension Leads & Power Boards
  - ✓ 3 Phase Lead's & Machines
  - ✓ Computers, Office Equipment
  - ✓ Forklift Chargers
  - ✓ Battery & Phone Chargers
  - ✓ Kitchen Appliances
  - ✓ Workshops
  - ✓ Schools
  - ✓ Motels & Cabins
  - ✓ Offices
  - ✓ Marine Vessels
  - ✓ Commercial & Mobile Food Vans
  - ✓ Nursing Homes
  - ✓ Cleaners
- And much, much more*

## Why Test and Tag?

A well planned program of preventative maintenance with regular electrical safety checks is the Ideal way to avoid unnecessary and unfortunate accidents, as well as the legal ramifications that follow. Electrical safety and regular inspections of your electrical equipment and all other workplace and home electrical equipment are not to be taken lightly. Each year in Australia there are dozens of workplace related deaths caused by electrocution and many more serious injuries or destructive fires.
