

ADD

ADD Team About Us

ADD Team Project Partners is an innovative architectural firm offering a range of project architectural services to architects, builders and developers in the commercial and residential sectors. With an extensive team of both local and international specialists to pull from, ADD Team Project Partners ensures each project can be completed to the highest standard, meeting the client's expectations.

Specialising in medium to large scale projects ADD Team's work ranges from commercial jobs such as hospitals, hotels and mining, to multi-residential, aged care and civic projects. With a strong commitment to project productivity and cost saving initiatives, ADD Team Project Partners ensures each job runs smoothly, efficiently and meets client's time-frames and budget requirements.

ADD Team Project Partners is led by Aladin Sylvestre, who is both the director and senior architect. Aladin brings a wealth of knowledge and experience in both local and international large scale projects, to the team. His experience guides his team to achieving ADD Team's goal of delivering expertise, capability, flexibility and increased profit.

WHAT WE DO

ADD Team Project Partners is committed to ensuring the entire process for any project runs smoothly from Concept Design and Development Approval through to Design Development and Document Delivery.

Concept Design

The first step in ADD Team's process is to develop the Schematic Design (SD) for the project. Working closely with our clients our contractors and specialty consultants develop a series conceptual drawings. These drawings are then reviewed and analysed to identify potential risk factors and problem areas, from which solutions are devised.

Development Approval

Partnering with the ADD Team ensures a faster and smoother approvals process. We take care of the Developmental approvals for our clients, including Structural and Services Engineering Coordination and, Model Validation and Compliance checking.

Design Development

After completion of the Schematic Design phase, we look at sourcing the products suitable to meet our client's requirements and budget. This includes elements such as the aesthetic, texture and durability of the products being used. Open communication is maintained throughout this process to ensure the client is clear on what the values for the different design elements are and, also their effect on the project.

Documentation Delivery

ADD Team can deliver the appropriate documentation in a variety of ways to suit our client's budget and time requirements. This allows for a smooth transition between the design and implementation phases of the project.

Construction Administration / Construction Phase Support

Construction support and administration is also available for our clients. The support is tailored to suit the specific needs of our clients, as requirements for Developers and Project Managers are often different to those of Builders.

CONTACT

ADD Team Project Partners are committed to excel in customer service. We aim to make every project as easy, streamlined and cost-effective as possible for our clients.
