Organisation is paramount in managing your workload. With a KAT Vehicle Shelving System everything has it's own place → saving you time → saving you cost → improving your profit!

ELECTRICIAN SHELVING SYSTEM

* Unit size will vary depending on vehicle type.

**EASY DIY
INSTALLATION
KITS
AVAILABLE**

The drivers side of our Electrical Kits has a variety of plastic bins for the multitude of parts and components the modern electrician needs to carry. The very easy access and functionality of these bins provide great organisation with everything at your fingertips. This system will also assist you in your stock control. You can easily see what items you are running low on therefore eliminating that inconvenient situation of being on the job and not having the right parts to complete it. You also have a 350mm open shelf with an 80mm Lip store your larger items. As well as a handy cable reel holder to stop your cable reels from sliding around the back of your van.

The passenger side gives you more plastic bins as well as two more 350mm open shelves to store all of your tools and equipment. The best thing is, because our kits contour to the shape of your van and also fit over the wheel arch they optimise the space in your vehicle therefore allowing plenty of room to transport any larger items that may be required for the job.

You can adjust the shelves up and down with a simple turn of a screw to give you the space you require. You can also add more shelves if you need as well as shovel guards and side panel extensions to utilize the space underneath the shelving systems.

With a powder coated black frame and shelves made from quality galvanised steel, not only do you get the ideal storage solution you also get a stylish design that will last for many years to come you will have your own highly efficient mobile workshop.
