

Conditions treated include:

- Osteo-arthritis
- Hip Dysplasia
- Post orthopaedic surgery
- Paralysis
- Lameness
- Wounds

With intensive rehabilitation "Milo" regained normal use of his paw.

Active Pet Rehabilitation is a small business set up by Carmel Keylock for the express purpose of helping owners restore their pets to functional mobility after accidents or disease.

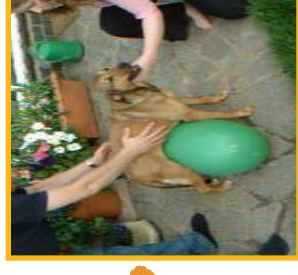

The only aim of this business is to help owners achieve this to the best of their ability. If money for high tech therapies or time to perform exercises is limited then we still aim to achieve the best results possible for the pet under the individual circumstances.

No apologies. We put your pets first.

Vets and pet owners can contact Carmel Keylock direct for assistance or advice on rehabilitation management for pets following accidents, injuries, or disease.

Working within the veterinary profession since 1984

0450113983

No apologies. We put your pets first.

Carmel working in practice following cruciate repair surgery

There is now a service available in conjunction with your vets - bringing rehabilitation therapy- to your pets.

As a member of the National Association of Veterinary Physiotherapists (U.K.) , and a veterinary nurse with 20 years experience in mixed and referral practices Carmel Keylock only works with veterinary referral or supervision.

It is essential we all work together to ensure the correct treatment and well being of your pets.

Benefits of Rehabilitation for your Pets

Pain Reduction

Improved Mobility

Return to Previous Function

Prevention of further injury

Prevention of recurrence of injury

Common techniques used include:

Massage– to aid tissue repair, circulation and pain relief.

Passive and active exercise plans– for improvement of circulation, prevention of adhesions and return to pre-injury mobility.

Acupressure– for pain relief, tissue repair and treatment of emotional/behavioural conditions.

Electrical therapies- such as ultrasound, neuro-muscular stimulation, phototherapy laser and pulsed electromagnetic field therapy.

Hydrotherapy– for weightless exercise to aid recovery from injury, and for therapeutic weight loss.

Aquatreadmill - to provide injury specific rehabilitation, muscle strengthening, and gait training exercise.

“ Barclay ” learning to walk again in the aqua-treadmill
