HyLoft's innovative wall and ceiling storage products allow users to maximize available space, creating new storage out of previously unused space in garages, basements, and attics. Installation is easy and we can provide assistance and support if required.

Perfect for storing large bulky items such as decorations, seasonal clothes, suitcases, large plastic tubs, sports equipment to name a few.

Each unit is designed and engineered to be fully adjustable, meaning they can be installed into any timber truss configuration as well as concrete ceilings.

Norsk PVC tiles are a perfect fit for any garage, gym, kids play room, and many other areas. All tiles are created with safety and durability in mind. Whether you need a garage floor tile or a basement tile, Norsk multi-purpose flooring is easy to install and is extremely durable and resilient.

The multi-purpose interlocking tiles are easy to clean, resistant to most chemicals and solvents and provide excellent acoustic and thermal insulation. Unlike cheap rubber tiles with distasteful odours that shed rubber granules, our odourless proprietary raw material formulation provides excellent anti-fatigue characteristics. We are confident that Norsk multi-purpose floors will exceed your expectations.

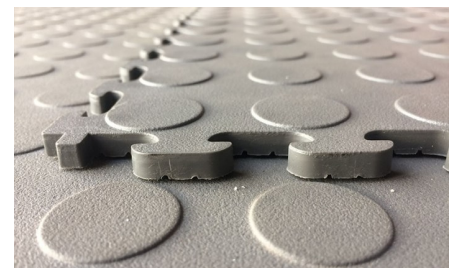

#### **Tooth Design**

The Norsk patented tooth design provides a much stronger interlocking mechanism than most tile designs, insuring robust connectivity under adverse conditions such as abrupt turning of car tires. This unique tooth design features ease of installation and yet is durable enough to permit easy replacement of tiles and flexible enough to be portable for temporary install applications like tradeshow.

#### **Air-Dry Technology**

Only Norsk interlocking floors feature our Patented Air-Dry design. The Norsk Air-Dry design permits airflow under the tiles, allowing moisture to easily evaporate or weep away. All Norsk flooring Trim Kits include this same feature, making it the most advanced PVC flooring product on the market.

#### **Premium Thickness**

Norsk interlocking PVC floors are .250"/6.3mm thick, making them functionally much stronger for use under vehicles or equipment in garage or commercial applications. This premium thickness provides more surface area to work in combination with the Norsk patented tooth design, creating a robust yet durable interlocking feature not found with competitive products made from much thinner gauge materials and inferior tooth design.

## Ulti MATE

FULLY MODULAR / EXPANDABLE DESIGN

The UltiMATE Workshop range is built for the toughest situations and offers strength, durability and adjustability. With workbenches rated for 1 ton (1,000kg), individual storage shelves rated for 150kg and drawers rated for 100kg, we've got you covered.

Strength comes from reinforced thick heavy duty steel which is powder coated to a beautiful finish. The modular design to the range means you can build a workspace environment perfect to your specific needs, or you can start small, perhaps with just a garage workbench, and extend over time. Will stand up to the toughest workshop as well as looking stylish in any garage. We're confident you won't find better value. Browse through the individual products as well as our package deals.

### Ulti MATE

FULLY MODULAR / EXPANDABLE DESIGN

Our cost effective range of Laminated MDF cabinets offers various sized cabinets that can have your area organised and looking great.

This state of the art industry leading modular cabinet line offers infinite design options through a diversified cabinet lineup to transform your garage or any room of the home or business into a room that will be the envy of all. No longer is the "man cave" for the car enthusiast, but for discerning home owners that want a welcoming and useable room of the house not filled with clutter.

Developed to add style and sophistication through modern design, the UltiMATE Garage cabinets built using polyurethane coated MDF doors, drawers and facings for a clean, finished and refined look. Cabinets are assembled using a thermo-fused melamine laminate over MDF for maximum strength and stability. Unique MDF construction has clean lines for an unparalleled, contemporary style. Oversized 9mm brushed zinc pulls and handles offer comfort and utility, while Euro hardware and roller bearing slides offer ease of use, quality feel and reliability. Built from 19mm MDF makes the UltiMATE Garage one of the strongest most durable ready to assemble systems available. Chrome adjustable feet elevate your system off the ground. Making it easier to clean under your cabinets and adjust on uneven ground. Available in Graphite Grey Doors with Black body. An investment in your home that will yield significant return.

**STOR** **PANEL**

Looking to eliminate clutter? Consider converting unused garage wall space into an effective, and organised, storage area. StorPanel gets all of your items up off the floor and neatly onto the wall, while still providing quick access to them. A lot more than just a great garden tool storage system. The StorePanel wall system (hooks, racks, baskets and shelves) can be used in unlimited configurations and be adjusted over time as your requirements change. Making it a perfect investment for your garage.

Installation is simple. First screw metal hanging strips to the wall. Next slide the StorPanel lengths onto the hanging strips. Then simply clip in the accessories and finally hang your items. Alternatively Garage Storage Plus can install the full system for you. Browse through our extensive accessory range and start planning your StorPanel wall organisation system today.

LOVE YOUR BIKE

Looking for the ultimate bike storage solution? Safely and securely store your bike without any heavy lifting with our Steadyrack Classic Bike Rack. Designed to pivot almost 180 degrees and fold flat for maximum storage space efficiency, our Classic Racks can be mounted on virtually any wall. Whether you're handy with the drill or it's your first-time on the job, installation is easy. To use any of our wall mounted bike racks, pull down the top arm, push your bike into the rack and pivot from side-to-side – it's that simple!
