Spring Failures
&
Down Time**

For Single and Tandem Axles

From 2000 lbs. to 12000 lbs.

Customer's Testimonial

The days of 'rock and roll' are over for me... at least when towing my boat. I just purchased the new Timbren Silent Ride Suspension. My single axle trailer carries my 4000 pound boat pulled with a pickup.

The change I have noticed is remarkable. The ride is smooth and quiet and I have more control and confidence.

Smoothness in towing was felt right away, especially over railway tracks and rough roads. The rubber mounted suspension is quiet, without the squeak and clank of metal springs. I noticed that any bumps or irregular road conditions no longer cause my truck and trailer to move from side to side laterally.

The trailer pulls evenly now. There's no swaying or jerking which helps me to feel safe when traveling today's busy highways.

Jack Hannah, Ontario.
