

Construction & Demolition Waste Reducer

Our company has just taken delivery of a revolutionary mobile shredder that has the ability to crush and recycle construction waste such as;

- Concrete
- Brick
- Blocks
- Asphalt
- General construction waste/rubble

WHY RECYCLE CONCRETE?? - It makes cents \$\$

DID YOU KNOW??

Concrete is the second most used product in the world after water!!

Fact: In the USA 140 million tons of concrete is recycled annually (*The Construction Materials Recycling Association, 2010*)

Key Benefits of this unit

- Low establishment cost
- No operator required
- High variety of materials that can be processed
- High output
- Able to be adjusted for output sizing
- Reduced noise & emissions
- Ease of set up (can be crushing onsite in ½ hour)

Environmental Benefits

1. Reducing landfill mass
2. Recycling for Re-use
3. Reducing carbon foot print

Uses for recycled materials

- Aggregate base course
- Soil stabilization
- Pipe bedding
- Landscaping material

Why use this machine???

The mobile shredder is a resource that can be utilised by your organisation ensuring an efficient, environmentally conscious process for disposal & reuse of construction waste from and in all your construction projects.
