

Logistics Help

Helping you create
High Performance Logistics

We help you implement the logistics strategies & solutions needed to achieve your business goals.

Cut your costs & unblock your sales to create customer loyalty through outstanding service & delivery.

"Our online business was suffering from crowded conditions and poor inventory control in our old store rooms above our shop. We needed a new warehouse and asked Logistics Help to help with the design and process improvement.

The results speak for themselves - our online business tripled in 7 months!"

Albert Yang - Owner Cell Bikes

Leverage our experience to achieve success in your business

Andrew Clark founded Logistics Help to bring his expertise gained in large corporate supply chains, to the SME market. "We source the best strategic partners to provide high end, yet affordable solutions to the neglected mid-sized and fast growing businesses. This enables us to achieve significant improvement results for our clients fast." – Andrew Clark

The Three Pillars of High Performance Logistics

Logistics Help

Inventory Planning & Purchasing

Warehousing

Freight

Are any of these challenges familiar?

- Stock outs of commonly sold items
- Slow moving & obsolete stock
- Slow and inaccurate stock purchasing

Maximise your inventory investment

- Higher service with less inventory
- Boost sales with better planning
- Faster and lower cost purchasing

Yes you can!

Investment in inventory planning will deliver the highest return of any investment in your supply chain.

We will help you analyse your inventory & understand what is going wrong in your planning & purchasing process. We'll help you implement new processes and systems, so that your purchasing is efficient, stock outs are minimised and excess is reduced.

Is your warehouse underperforming?

- Slow and inefficient order fulfillment
- Poor inventory accuracy, missing stock
- High costs & no performance measures

Accelerate your warehouse

- Improved layout for fast flow
- Accurate inventory with better process
- WMS for productivity and accuracy

What you can do

We will help you get the best out of your existing systems with redesigned business processes and a warehouse layout designed for improved efficiency and flow.

Implementing advanced technologies such as Warehouse Management Systems (WMS) and barcode scanning will rocket you to the peak of performance, - and yes, you can afford it.

Is it time to rethink your freight?

- High freight costs
- Lost and damaged freight
- Inadequate reporting and tracking

Add value to your freight

- Carrier selection & relationship review
- Monitor freight performance & costs
- Match freight to customer demand

Take action!

We can review your freight usage and develop ways to reduce costs through more efficient business process. A market review of alternative carriers and delivery options will find the optimum freight solution.

Integration of a Freight Management System with your business systems will enable improved performance tracking, greater productivity and accuracy.
