

## Crystal Technology Process™

- It begins with a complete extraction of all forms of particles, debris, skin cells, dust mites and a host of contaminants which accumulate in the everyday mattress

- The second stage involves a triple strength germicidal UVC treatment, which is the same technology as used in the medical industry for instrument sterilization

- A proprietary formulation called Crystal Technology™ is applied to the area

- The Rotary Deep Pulse™ System is operated across the surface, using vibration rather than rotation to activate the solution and displace any stains or marks

- Stubborn stains are targeted with one of more than 12 purpose designed stain treatments

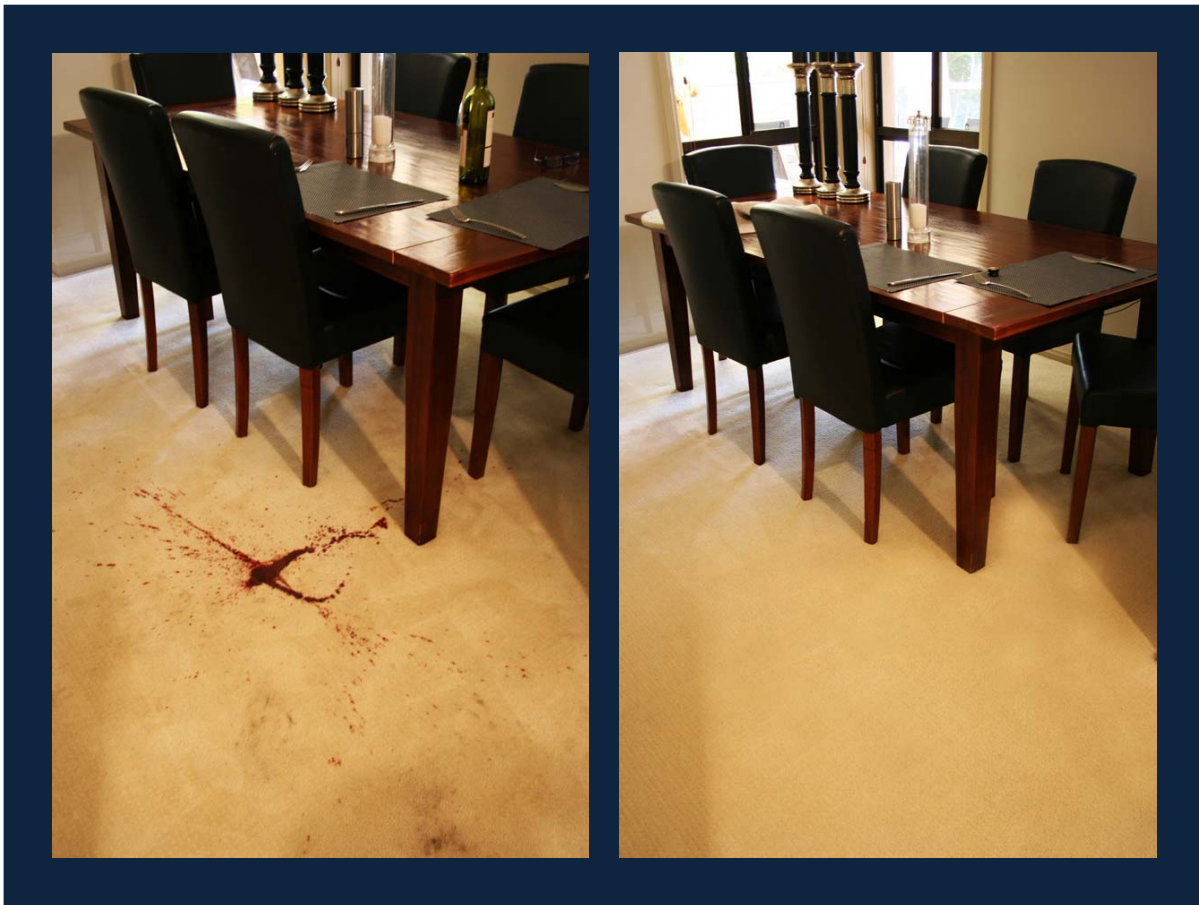

- The carpet pile is groomed and reset

- A non-toxic virucide and germicide helps to prevent dust mites and pathogens from proliferating

- The final stage is applied, which involves the only lab proven and certified Anti-Allergen Treatment in the world.

*The before and after photos showing the results using the Crystal Technology Process on a red wine stain.*
