

Mean green machine

The Mcloughlin Scrub Master has been proving popular amongst landscapers, contractors and farmers for many years.

The Scrub Master is designed to increase productivity, often doing the work of three men. At just 1150mm wide, the machine is perfect for tight access, enabling it to go where other machines won't. The Scrub Master not only talks the talk, but walks the walk. This is backed up by its rock solid two-year warranty.

"Our machines come fully loaded with accessories that other brands charge extra for," said Jay Millard, marketing manager. "Standard features, such as the oil cooler, NSK bearings, Donaldson filter, LED light bars, grease points everywhere and Italian valves, give the Scrub Master great reliability.

Ease of operation is a key point on the Scrub Master with a simple three stick operation. In comparison to some of its rivals, the controls are smooth including the Hydra Flow lever for controlled operation of attachments, such as the 4 in

1 grapple for gently grabbing objects. The hitch plate is similar to other mini loaders so you can hire attachments when needed.

At the back of the beast sits a 23hp Briggs & Stratton V twin motor, providing the Scrub Master with more than enough power for loading, digging, drilling, trenching or any other tough job that's thrown at it. The high fold-up rear step helps with departure angles and also the ergonomics, putting the driver in a comfortable position to reach the controls and retain a clear view over the machine to the bucket.

"I get a great sense of satisfaction in seeing the surprised look on a customer's face when they hear that in some cases I will be saving them up to \$20,000 for a complete package," Jay said.
