

SANDBANK® COLOUR TIPS

General

Sandbank® is a soft, soothing and stylish choice of colour. It is inspired by natural elements such as coastal dunes, Spinifex grasses and inner-city sandstone.

Sandbank® presents an extremely versatile shade of yellow: optimistic in the summer sun, serene and hopeful on an overcast winter day.

Housing Type

Sandbank® perfectly complements the classic forms and colour schemes of traditional housing designs, and can also be used successfully in composite building styles.

It is suitable for Traditional, Classic, Modern, Country and Heritage housing types.

Product Application

Sandbank® harmonises with a variety of contemporary building materials and is typically used as walling or roofing in composite building styles.

This colour is extremely popular for large commercial buildings and is appropriate for many other commercial uses.

Environment

Sandbank® symbolises the Australian sun and sand, and harmonises with a wide range of natural environments. It is ideal for use in coastal settings, where the colour blends with natural beach surrounds. It is a cheerful alternative to the more traditional colour schemes used in metropolitan settings.

Gegography/Location

Sandbank® is mainly used in industrial settings for commercial applications, or in rural and metropolitan locations for residential applications.

According to the latest COLORBOND® steel survey, Western Australia shows the highest demand for Sandbank® where the colour is reflected in the dried grasses and flora of the state. Its popularity in Queensland is also increasing.
