DESIGNED FOR SAFETY

[www.alisafe.com.au](http://www.alisafe.com.au)

**AliSafe** are specialists in the design and manufacture of aluminium safety access products including Mobile Access Platforms, Truck Access Platforms & Customs Platforms

## Truck Access Ladders & Truck Access Platforms

**Access Angle** - Choose from our standard access angle of 67 degrees (**Truck Access Ladder**) or 45 degrees (**Truck Access Platform**).

You can have either checker plate or grid mesh for the working deck. Checker plate is ideal for indoor use or where an enclosed floor is needed. Grid mesh is ideal for construction sites or where water and dirt can build up.

You may also require non slip, HiVis nosing.

The choices depend on the site conditions. Call and ask our sales team for the best solution to your **Truck Access Platform or Ladder requirements**.

**Designed for Safety** and **with the customers requirements** in mind - The **Truck Access Platform** pictured here was designed in conjunction with the customer and included extra castors in the centre of the platform and the ability to remove the return handrail and join 2 platforms together.

The **Truck Access Platform** is 6m long with Stair Access. The handrails on the steps are designed for easy access with round tube. The handrails on the platform itself are also designed to be user-friendly with a curved return rail and no hard corners. The platform is being used on a construction site and has been a great success with employees and contractors.

**Platform Width** - Platform width is your choice. Our standard width is 700mm and comes complete with a tie in system for stability, or you can choose a width to suit your situation.

Our team can advise the best solution for your site.

**Platform Length** - The platform length can vary from 2m to 14m. We can supply them in sections for freight and storage options.

Talk to **AliSafe** about your requirements for a **Truck Access Platform** or **Truck Access Ladder**. With our experience and advice we are able to design a solution specific to your site.

## Work Platforms

**Work Platforms** - are designed with 2 solutions in mind

1. To enable access to an area where you can work from within the handrails on the **Work Platform**. A full handrail around all sides of the working area.
2. To enable access to machinery, mezzanine floors or any general access to areas where a normal ladder is not sufficient. Ability for an open side on one or more sides of the platform area.

**Work Platforms** can be almost any height, width and length within the Australian Standards.

**Access Angle** - Either 45 or 67 degree (steeper angle)

**Working Deck** - Either Checker plate or Grid Mesh

**Mobility** - All Work Platforms come standard with a Wheel Barrow Style "Lift" Action but have the option of 4 x quality Swivel Locking Castors.

## Custom Platforms

When a standard product is not what is required on site, **AliSafe** can work with you to design and produce a custom product that will be fit for purpose. We will ensure the design meets your requirements and Australian Standards.

And to confirm each custom platform is made to specifications, we connect any separate units prior to testing to ensure they pass Quality Control.

A custom platform is generally a re-design of a standard product and doesn't need to cost the earth as the word "custom" would imply.

Give us a call and see how simple it can be

## SWL Testing

With all design solutions **AliSafe** will send you specifications before production. This gives you the opportunity to check and change any details, ensuring you receive the exact product you requested.

Once you have approved the design and your product has been manufactured, it can be tested by an independent NATA approved engineer to a specified SWL (Safe Working Load).

For more information or general advice call our office. **On: 07 5500 6659**

### Our product range includes:

- A standard range of Mobile Access Platforms
- Custom built Mobile Access platforms
- Mobile Truck Access Platforms to help load and unload trucks safely
- The lightweight design of our product is ideal for companies with manual handling issues and allow the safest possible access to areas previously considered a work hazard. We only use the best quality materials to ensure longevity of the products we manufacture.
- AliSafe offers a service that is of the highest quality, products that will stand the test of time and at a price that makes sense. Our commitment to good old fashion service and after sales service is very important to us.
