The plumbing in your home is truly the most critical system that adds convenience and functionality to your daily life. When issues strike, this is an inconvenience for any homeowner. At Rapid Plumbing Group Pty Ltd., we take every plumbing complication seriously.

Read to see what our [happy s say about us here](#).

What is a plumbing emergency?

There are many types of plumbing emergencies that can occur in the home. A few of the most common are:

- Pipe leaks.
- Frozen pipes.
- Blocked drains.
- Blocked toilets.
- Tap malfunctions.

While some of these problems can be minor, they tend to enter the emergency category when they begin to cause damage to your home, they cannot be fixed by a regular plunger, they cause a disruption to your daily routine, or they disrupt the proper function of your piping system.

If you encounter any of the above problems, the first step you should take is to turn off your water system by shutting off the main valve. This will stop the flow of water and cease any damage that may begin to occur. Once done, give our experts a call and let us solve your plumbing issues in no time.

What are water leak detection services?

In a plumbing emergency, even after you shut off the main valve to your water supply, the meter will continue to run. This is a clear sign that you have a water leak somewhere in your home. The trick is to find it.

A professional technician is fully equipped to handle this problem by utilizing specialized tools and experience in water leak detection. When dispatched to your residence, our professionals will utilize tools to locate the leaking piping that could be either within your home or underground.

Water leak detection is a great way to find the leak quickly before it causes anymore damage or inconvenience.

How are blocked toilets resolved?

One very common plumbing emergency is a blocked toilet that simply cannot be resolved with a regular plunger. This type of blockage results from something being lodged deeply within the pipe. Professional technicians resolve this problem by using what is called a "snake," by lodging it into the piping system to remove the blockage.

If the blockage results from something more severe, such as sewage backup, our technicians may use more specialized techniques such as water jetting. The water jetting technique is essentially the use of an extremely high pressure jet stream of water that cleans out the pipes effectively.

Professional Services Guaranteed

We at Rapid Plumbing Group Pty Ltd have years of experiencing even the most severe plumbing

problems. Our professional maintenance crew can be promptly dispatched to your home to resolve any problem that you may have, or to simply perform a maintenance check that can increase the effectiveness of your plumbing system and prevent future problems.

For quick service, just give us a call today at 1800 172 743! With lifetime warranty on our labor, you can rest easy knowing that your plumbing services are of the highest quality.
