To learn how KOHLER Residential Generators can mean big business for even the smallest builders, visit our Web site or contact your local KOHLER Distributor.

KOHLER
POWER SYSTEMS

KOHLER Quality for Home Builders.

Pre-wiring homes for KOHLER® Residential Generators is a powerful way to build your business. In addition to being easy and cost-efficient, pre-wiring gives customers a value-added service few competitors provide. Plus, pre-wiring for generators can save homeowners thousands of dollars in installation fees. Customers know and trust the KOHLER name and appreciate the security of backup power within seconds of a utility power outage. And by offering the convenience of pre-wiring, customers are more likely to purchase a generator – which means added business and sales for you.

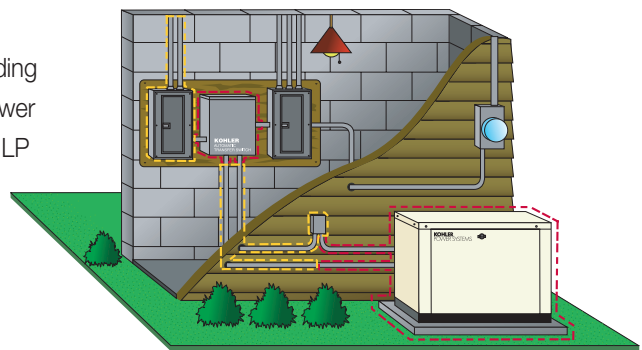

Slightly larger than the main distribution panel, the automatic transfer switch is mounted inside or outside your home and exercises the generator regularly so it's ready when you need it most.

A powerful way to build your business.

- Pre-wiring adds value and differentiates your homes from the competition
- Pre-wiring adds minimal expense during construction, yet can save homeowners thousands in installation fees
- Pre-wired homes make it easier to sell KOHLER generators

Essential Loads Installation Diagram

To pre-wire a home, simply add three components during the building phase – install secondary panel with essential loads circuit, run power cable and control wire (both shown outlined in yellow), and plumb LP or natural gas to the location of the future generator (not shown). Now that the home is pre-wired, homeowners need only add the KOHLER Automatic Transfer Switch and a KOHLER Residential Generator of their choice (outlined in red).
