Artwork Requirements

What artwork formats are accepted and how do I setup my artwork?

Artwork Format - PDF (Preferred) or High Resolution Jpeg

Please setup in 1:1 scale with 150DPI

Font: All the text Must be outlined

Color Mode - CMYK (Cyan Magenta Yellow Black)

How do I make sure about the artwork I have provided is correct before it's printed?

Once an order has been placed we follow a robust process in making sure we deliver a high quality print from the artwork you have submitted. Our Artwork & Prepress team would manually verify the artwork in terms of quality output, we do not go ahead with the print if the artwork uploaded is not suitable for printing on the product you have selected and at times when artwork cannot be adjusted we immediately notify you in an email requesting you to provide an alternate artwork for the product as per specifications, your job may be placed on hold until we receive the correct artwork. Please note we do not take responsibility of any spelling errors in the artwork.

Why does my print color differ from the artwork I have provided?

At BannerBlokes we print on CMYK format which may be appearing different on the device you're comparing the color as monitor screens project RGB - RGB stands for the three primary colors of light - Red, Green, and Blue. RGB can be described as the computer's native color space for capturing images and displaying them. RGB is not used for printing on paper. The RGB color model, based on a Cartesian co-ordinate system, is considered as an additive model in which red, green, and blue are combined in several methods to reproduce all other colors. In the RGB color model, each color appears in its primary spectral component of red, green, and blue.
