The Benefits

1. Finding the Zen Balance.

Our bodies weren't designed to stand or sit for long periods of time. The movement between both positions is key and why a power adjustable workstation is especially beneficial.

A power adjustable workstation can help you lose weight, be more energetic, increase focus and can even reduce your risk of major diseases.

2. Aches & Tension

How many hours do you sit on a daily basis, and how often do you actively make an effort to get up and move around or stretch? Discover the many benefits of a power adjustable workstation with Zen Space.

3. Increase Energy, Reduce Fatigue

Think about your typical day at work. Stay in the same position for more than 30-45 minutes and your muscles start to cramp, along with slowing blood flow leaving you feeling restless and uncomfortable. Researches in the US found that too much sitting correlates with weight gain. Researches in Japan found the combination of sitting and standing equals less fatigue, less leg swelling & increased alertness.
