

A blocked drain pipe can quickly lead to problems in your home.

JUST ONE LEAKING DRAIN PIPE CAN RESULT IN WATER POOLING UNDER YOUR FLOORS AND FIXTURES, POTENTIALLY CAUSING LASTING DAMAGE.

We often take for granted the network of drain pipes around our properties that supply water and remove waste on demand. Until they stop working, that is.

AVOID EXPENSIVE REPAIR BILLS FOR YOUR HOME

The best way to deal with a blocked drain pipe is to prevent it from getting blocked in the first place. Just one leaking drain pipe can result in water pooling under your floors and fixtures, potentially causing lasting damage. Regular maintenance on drain pipes can prolong their life, prevents leaks and help you avoid expensive repairs. In the event you do need a solution for your drain pipe problems, Nuflow has the ability to repair pipes without the hassle of pipe excavation or causing damage to infrastructure by digging

Solve leaking and damaged drain pipes quickly and efficiently with Nuflow.

WE FIX PIPES®

Many drain pipe repair solutions require digging and destroying surfaces, causing havoc in your home. Not so with Nuflow's Blueline system.

Blueline solves issues leaking or blocked drain pipes without having to dig, meaning minimal damage and disruption to your home and no being stuck with expensive infrastructure repair bills.

Have you noticed:

- Toilets and sinks are filling up fast and receding slowly?
- Drainage overflow outside the house?
- Wet spots appearing on walls?
- Pooling on floors?

These signs all indicate you could have a blocked or leaking drain pipe. We can inspect the drain pipe system to diagnose the problem, once this is completed we will clear any blockages.

To repair the drain pipe, a liner is inserted through existing drains to stop leaks and structurally repair blocked, damaged or leaking drainage pipes. It's the most versatile and durable pipe lining system in the world as well – it is easy to install and comes with a 50-year manufacturer's warranty.

Just one leaking copper or galvanised water pipe can result in water pooling under your floors and fixtures, potentially causing lasting damage.

If your water has an odd, potentially metallic taste to it, it's possible your pipes have become corroded. You could dig up the old pipes and replace them or you could go with the easy, non-intrusive Redline system solution.

How do you know if your pipes are corroded?

- Water may be discoloured
- Water pressure may be poor
- Water may have an odd taste to it

After water pressure and flow tests, we identify your problem areas and blast away corrosion, before coating the inside of your pipes with a Redline lining that creates a barrier between the pipe and water flow, preventing future corrosion and pinhole leaks and strengthening your pipes infrastructure for decades to come.

Best of all, you don't need to vacate your home during installation and temporary water systems can be installed to make sure you still have access to a water supply while installation work is being done.

NO MATTER THE TASK, BIG OR SMALL, EASY OR HARD, NUFLOW COULD HAVE THE SOLUTION – JUST GIVE US A CALL TO SEE HOW WE CAN HELP.
