

Omnilux light therapy has been developed as a natural, non-invasive and relaxing procedure to help reduce the appearance of the visible signs of skin aging. It boosts collagen production, minimises fine lines and wrinkles and visibly improves your skin's appearance. NASA continues to use this technology to accelerate wound healing and maintain the health of astronauts' skin in space.

Omnilux light therapy uses narrow band light emitting diodes (LED) to target skin cells and maximise treatment results in a wide range of dermatological conditions. TGA approved and clinically proven, Omnilux light therapy complements the skin's own natural moisture renewal process to plump it up. Also proven to accelerate wound and scar healing, it is ideal for post-surgery recovery.

## ***Omnilux™ Revive***

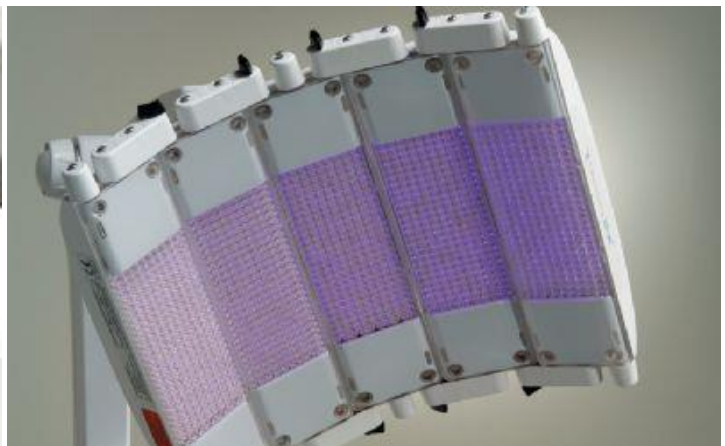

Omnilux Revive (red light) acts to rejuvenate and repair damaged skin, improve uneven skin tone and reduce the appearance of fine lines and wrinkles. Omnilux Revive delivers a precise wave length of visible red light that penetrates deep into the skin to stimulate fibroblast activity to ***naturally boost the production of collagen*** for a plump healthy skin.

## ***Omnilux™ Blue***

Omnilux Blue (blue light) is designed to deliver pure blue light at a precise wavelength. The blue light is clinically proven to be effective in the treatment of acne. By stimulating antibacterial and anti-inflammatory activity in the deeper layers of the skin, it works to stabilise sebum production and ***effectively treat active acne***.

*Omnilux™ Revive*

*Omnilux™ Blue*

An Omnilux light session can be combined with other treatments such as microdermabrasion, peels, oxygen infusions or antioxidant infusions and leaves the skin clearer, brighter and smoother. The light is warm, just like lying in the sun but without the damaging effects of UV sunlight.

At your consultation a treatment plan is carefully devised for you, to allow for optimal benefit and long lasting results. A course of Omnilux light therapy comprising 6 to 9 treatments over 3 to 6 weeks is recommended.

## ***Advantages of Omnilux™ Therapy***

- Stimulates the body's own cellular mechanisms by photomodulation
- Non-invasive, non-ablative safe therapy
- No damage to sub-dermal tissue
- Relaxing and calming experience
- Compatible with existing skin rejuvenation techniques such as Botox™, IPLs, laser resurfacing and cosmetic surgery such as blepharoplasty and breast reduction and augmentation
- Allows treatment of large areas such as the face and chest
