A Cleaner Way To Live.

At ChemDry, our promise to you is simple.

If a spot returns, so will we.

If your carpet is damaged by us, we'll fix or replace it.

The Better Way To Clean.

Drier.

ChemDry is Drier.

Carpets cleaned the ChemDry way are left sparkling clean and dry in 1-2 hours, not the 1-2 days you may have experienced with other methods like steam cleaning. Our secret is that we use the power of effervescent, carbonating cleaning solutions that are so effective that we need to use only a small amount of moisture to achieve miraculously clean carpets. In fact, we only need to use approximately one-fifth to one-tenth of the moisture that steam cleaners use.

And if that isn't enough, the ingredients used in our cleaner are copied from Mother Nature herself.

We don't need soaps, detergents, or harsh chemicals to accomplish our great cleaning results because we've got the power of crystal-clear carbonating bubbles.

Cleaner.

The ChemDry carbonating process uses a fraction of the water of steam cleaning, leaving behind less moisture on your carpets and no soapy residue that can cause stains to return.

ChemDry is Cleaner.

If you have ever used soda water to remove a stain from a shirt, you know how the carbonating principle works. We merely perfected it for carpet. The awesome cleaning power of carbonating solutions creates a powerful reaction that deep cleans carpets in a safe and gentle way...and because the bubbles do the work for us, ChemDry does not need to use the gallons of soapy cleaning chemicals that steam cleaners or do-it-yourself machines rely on so much. Soapy residues attract dirt like a magnet, causing your carpet to get dirty again, faster than ever.

Healthier.

ChemDry is Healthier.

The EPA recommends having your carpets cleaned every six months. Many people assume that the best way to clean is to "soak" their carpets and "suck" the water back out, the method commonly known as steam cleaning. But this soggy approach may have some serious drawbacks. Steam cleaning can dump buckets of water on your carpet and underlay. When left behind, this water can create a breeding ground for mold and bacteria in just hours. It can also leave behind chemicals and soapy dirt-attracting residue.

That is why ChemDry's low moisture process is healthier.

Steam cleaners can drive dirt and moisture down through your carpet and pad.
