

Testimonials- Commercial Maintenance Plumbing

Helen Chapman - Cairns Harbour Lights Management Company Pty Ltd –

"Eagle and Stork have delivered an exemplary service to Harbour Lights for several years. I have consistently found the whole team to be dedicated, competent and happy to go the extra mile. It's refreshing."

Greg Meares – Head OF Engineering & Property Services – Cairns Reef Hotel Casino –
Tim Eagle of Eagle & Stork Plumbing and I have enjoyed a business relationship over several years and will continue to do so due to a common appreciation of business in Far North QLD and specifically within the Hotels and Resorts sector. Eagle & Stork's abilities were specifically the reason they were chosen by us at the Pullman Reef Hotel Casino. Their professional and honest approach to all works and projects is commendable whilst also offering an outstanding and prompt service as always.

Testimonials – Mechanical Plumbing

McClintock Engineering Group

The JCU central energy plant comprised of 11.2MW of chillers with expansion capacity to 15.4MW. Eagle and Stork were the piping subcontractor on the project and delivered, in a highly professional manner, approximately 1.4km of service trench including an underground chilled water ring main, all of the piping installation within the central energy plant energy facility and associated pumping and component sensing points. The workmanship was of extremely high quality with a level of pride that cannot be detailed in a tender or valued in a tender price. The facility has been operating for approximately 6 months without any performance or maintenance issues.

Mark Wilsmore Hansen Yuncken Pty Ltd, Queensland Building Services Manager at Central Energy Plant JCU Cairns Qld

– Eagle and Stork installed the chiller and condenser water pipework for the Central Energy Plant at James Cook University's Douglas campus in Cairns. The project involved the installation of pipework within the plant room to suit the new chiller plant and the completion of the greater campus chilled water ring main which involved the installation of some 1,500m of pre insulated 315mm diameter HDPE.

The team from Eagle and Stork installed all piping systems, both internally and externally in line with our construction program. They worked in close collaboration with other trades on site and complied with all reasonable requests. Their works were completed on time, on budget and in accordance with Hansen Yuncken's safety procedures.

The quality of the finished product is a testament to the pride Eagle and Stork take in their work and shows their commitment to quality is real. It was a pleasure working with the Eagle and Stork team during the project, I would not hesitate to call them next time.

Rowan Riggall, Site Manager, Watpac Construction Pty Ltd

– Darwin Airport Pipe Freeze & live cut into existing chilled water piping system.
Tim, I couldn't be happier with the final outcome.
Thank you and your team for the diligence and co-operation displayed in a difficult situation.
