

Hi, I alone can lay 50 eggs in  
**ONE DAY!**

By the way, all of these eggs  
are in your carpets, floor  
boards and outside... every  
day!

## The flea lifecycle

Flea infestations can begin long before you see biting, jumping bugs.

### FLEA EGGS

fall quickly onto your carpet, furniture and yard

### FLEA LARVAE

head for the dark places in your home to feast

### FLEA PUPAE

grow in a cocoon for 8-9 days ... waiting to emerge

### ADULT FLEAS

Bite your pet and will reek havoc in your home and for your family

Mum, have you been bitten by something about 400 times a day? Fleas do!

That's why Fleas drive us mad! Even in winter...

*We see only 1 in 100 fleas on our pet, yet imagine being bitten 400 times per day, and that's only by one flea ....*

*Please treat your pet and your home not only in summer but winter also as it's the perfect time for feeding and waiting ... ready ... to jump on you, your pets and your family*
