

ECORESTORE

REVEGETATION RESTORATION REHABILITATION

COMPANY PROFILE

ECO RESTORE PTY LTD

EcoRestore provides a wide range of top quality, affordable services in habitat restoration, indigenous revegetation, land rehabilitation and fire management and general land management to private landholders, community organisations, civil works contractors, land developers, government and public authorities.

EcoRestore are specialists in the identification, control and monitoring of invasive flora species and re-establishing indigenous flora and fauna communities.

OUR TEAM

EcoRestore are committed to developing skilled, dedicated and passionate bushland workers and land managers.

We have an ongoing training model to help our staff build the requisite skills and capabilities to provide exceptional ecological services; promote personal growth and ensure first class adherence to Best Practice Safe Work Procedures and Occupational Health and Safety Standards.

Michael Neighbour

Managing Director - Michael established EcoRestore in January 2008, he has over 14 years' experience in ecological restoration techniques and land management. He has specialised knowledge and skills managing riparian, wetland and grassy vegetation communities in addition to general bushland vegetation communities. He has managed over 100 sites, including 8 Net Gain offset projects and has seen 50+ sites from start to hand over, including several award winning projects. Michael liaises with clients and is responsible for reporting and quality control on all EcoRestore projects.

SERVICES

Environmental Weed Control

EcoRestore offer trained, ticketed and skilled personnel to effectively remove environmental pest plants.

We offer a wide range of species particular techniques, including small and broad scale herbicide application via dual line Quikspray™ rig, backpack spot spraying, stem injection, cut-and-paste, drill-and-fill, along with hand and chemical free weeding techniques.

We also offer woody weed control and removal through ecological prescribed burning, chain sawing, lopping, chipping, brush-cutting and slashing.

Revegetation and Installation Works

EcoRestore sources, supplies and installs local provenance indigenous plants for revegetation projects and provides maintenance and infill planting.

Company Profile

We offer a range of other ecologically based installation works including sourcing and installing tree guards, bird netting, weed matting, mulch, tree-guards, nest boxes as well as pest animal control fencing.

Bushfire Risk Management

EcoRestore can provide land management services which will manage and offset the risks associated with protecting properties and vegetation communities from wild fire. We utilise various techniques such as slashing, biomass removal and reduction, prescribed burning, establishing mineral earth breaks and selective, sustainable and legal vegetation pruning and clearing.

Our commitment to the conservation and restoration of indigenous vegetation communities ensures the best practices are in place.

Land Management Services and Plans

EcoRestore also offers more generalised land and vegetation management services such as mowing slashing, fencing, weed control, tree removal and so forth as required.

Land management plans and schedules are available on request.

Vegetation Mapping and Assessments

EcoRestore provides vegetation mapping and assessments as required and has the capability to produce GIS maps.

PROJECTS

EcoRestore have had stewardship of over 100 project sites across south east Victoria for a range of government and private clients.

Ranging from small 'one-offs' to large multiple year and ongoing contracts these projects have called for a diversity of environmental, ecological and land management services that we have had the fortune to deliver along with installing over 200,000 indigenous plants.

RESOURCES

- ◆ Quikspray Rig™: 600 L Capacity with 150m dual reels with off-road capability
- ◆ GPS
- ◆ All Terrain Utility vehicle and off-road trailer
- ◆ 4WD Utility vehicles
