

Why choose Prowler Proof and Absolute Security

10
YEAR
REPLACEMENT
WARRANTY

When you choose Prowler Proof product, installed by authorised dealer Absolute Security, you know you've made the right choice in creating a safer place[®], at your place.

Install to the Australian Standard

The installation of a security screen is just as important as the manufacturing of it. Prowler Proof have audited Absolute Security, and provide ongoing training to ensure your product is installed to the Australian Standard for Installation of security screen doors and window grilles (AS5040).

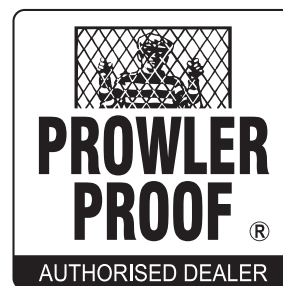

About us

We are proud to be a Queensland owned and operated family business. We have built a reputation as a trusted, reliable supplier of Security Screens and Doors and Blinds. Whether you are renovating or building we are here to help develop a tailored solution to suit your needs and budget.

Absolute Security
Reviews

Not all security screens are the same. Because of the way they have been designed and manufactured, Prowler Proof can offer some unique features, including:

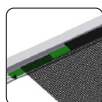

Consistent manufacturing process

All Prowler Proof screens are manufactured in our fully automated, PROBE world class rated factory. This means the screens that go on your home are produced to the same standard as the screens that undergo performance testing.

No visible joints

Prowler Proof security screens feature welded corners. A weld joins two parts together, a screw or a rivet merely holds two parts together. A weld can actually be stronger than the parts joined...and it looks better than screws or rivets too. All products are powder coated after the corners are welded, so there is no raw aluminium, reducing the risk of corrosion.

Highest corrosion resistance

Whenever two different metals interact, there's a risk of corrosion. With no fasteners, screws or rivets to penetrate the frame and the mesh in order to keep them together, this risk is eliminated in a Prowler Proof security screen. Our screens are assembled with a heavy duty aluminium frame and 316 marine grade stainless steel mesh, joined together in a mechanical and chemical bond that is virtually unbreakable and provides complete insulation of the two metals. Prowler Proof ForceField® and Protec are the only 'complete' security screens on the Australian market that have passed the 1,000 hour neutral salt spray test - most manufacturers only test the mesh. They've also passed the 1,000 hour acetic acid salt spray test. With a pH similar to vinegar, acetic acid salt spray is 10,000 times more acidic than neutral salt spray. ForceField's 316 marine grade stainless steel mesh has survived a 10,000 hour neutral salt spray test as well.

Only Qualicoat accredited applicator

Prowler Proof is one of only 10 Qualicoat approved powder coating applicators in Australia, and the only security screen manufacturer. Qualicoat is an internationally recognised, third party accreditation scheme for Quality Assurance in powder coating, and is audited by independent NATA approved auditors. NATA-approved auditors conduct random audits twice a year, and applicators may lose their Qualicoat approved status if they fail on any part of this routine testing. The long term benefit for you, is that the powder coating failure rate is dramatically reduced, and the ongoing maintenance and cleaning requirements of Prowler Proof screens is less.

Australia's only full replacement warranty

Because of the way they're constructed, the Prowler Proof warranty is a Full Replacement warranty. Once constructed, there is no way to pull Prowler Proof products apart. It's one of the reasons our products are so secure and it's also the reason that we fully replace the product in the rare instance of a warranty claim. When we replace the product we also replace hardware such as rollers, hinges and locks, so you get an entirely new product.

The largest colour selection

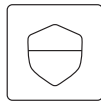

It doesn't matter what colour you're after to suit your home, with the largest selection of powder coat colours, over 300 to choose from, we'll have the perfect one available.

Partner with the best

We only partner with suppliers we know will deliver the highest quality components to go into our screens. This includes companies like Lockwood and Dulux, who are also committed to meeting the standards set out for their particular industries, just like Prowler Proof is.

So much more than a bug stopper

A high quality security screen is so much more than just a bug stopper for your home. You need to feel confident that the screens you choose can survive everything life can throw at them. Prowler Proof are Australia's premium security screens. But don't just take our word for it, check out what Prowler Proof has been independently tested and proven to stop:

Stop unwanted intruders

All Prowler Proof security products have been through every security test in the book - and passed them all with flying colours. The Australian Standards test for security (AS5039) consists of six separate tests that all have to be passed by the same test sample.

Stop insects

ForceField and Protec are security screens and insect screens in one. The openings in the mesh are big enough for you to enjoy your view, but still small enough to keep just about all little creatures outside where they belong.

Stop flying storm/cyclone debris

You don't need to live in a cyclone-prone area to benefit from a screen that has passed cyclone testing. Storms throughout all of Australia can cause flying debris that can break through an unprotected door or window, and cause potential internal damage. ForceField has passed AS/NZS 1170 which includes the missile test at impact speeds of up to 104 km/h as well as the ballistics test at impact speeds of up to 178 km/h.

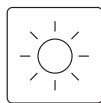

Stop falls

Falling from heights is a major issue in Australia, and to help reduce the incidence of falls, changes have been made to the National Construction Code (NCC). To remove window restrictors, in certain applications, the fitting of a screen that resists an outward horizontal action of 250 N is required. Prowler Proof security screens easily exceed these requirements.

Stops embers

ForceField passes the Australian Standard for construction of homes in bushfire prone zones (AS 3959), so is another line of defence in preventing dangerous embers entering a home during a bushfire.

Stops heat/cold

When purchasing screens, don't just consider the initial outlay, but the ongoing costs for your home. A well designed security screen can make a major difference to the energy consumption (power) requirements of your home. ForceField and Protec have been tested and proven to keep solar heat and UV light out during summer and reduce heat loss during winter. During testing ForceField reduced solar heat gain and UV light by up to 67% (WERS rating 5 stars), and reduced heat loss up to 28% (WERS 3 star rating), and Protec reduced solar heat gain and UV light by up to 62% (WERS rating 4.5 stars), and reduced heat loss up to 18% (WERS 2.5 star rating).

We're proud of our test results, and they're all publicly available on our website. Service levels.

But don't just take our word for it. Check out our independent reviews and see what others have said about our quality.
