## GARAGES

## GARA-PORTS

### Gara-Ports

Gara-ports can be added to increase the overall length of your building and offer vehicle protection or additional entertaining area. Available in bay sizes up to 3.75m long.

### PREMIUM PRODUCT:

In our premium steel garage and shed range we are able to offer you a building that is fully engineered and designed for even the harshest environments, whether on the coast or in the outback. Our buildings include as standard the following features:

#### Infinitely Variable sizes

Width – in increments  
Length – any bay  
Height – any height  
Roof pitch – Choice

More sizes now available.  
More roof pitches

#### Engineering

All buildings are engineer designed to comply with all relevant codes as set down by statutory authorities and councils.

#### Materials

We use only top quality Australian made Bluescope Lysaght materials. Our frames are fully bolted galvanised 'C' section. Columns and rafters range from C100 to C250, in various thicknesses, designed to suit different wind regions.

#### Roof Purlins & Wall Girts

Bluescope Lysaght Topspan Zinalume® steel section, used continuously over 2 bays for greater strength and ease of construction.

#### Connection Brackets

All brackets are of grade 450 hi-tensile galvanised steel designed to meet the different wind regions throughout Australia. These brackets are pre-punched and are fixed to framework through prepunched holes using hi-tensile bolts.

#### Properly capped and flashed

Where some buildings fold cladding around corners, we ensure against water leakage and protection from sharp edges by including ridge and barge cappings, corner moulds, trims to roller doors, personnel doors, windows etc.

#### Roller Doors

We use only quality roller doors on our range of premium steel buildings. Wider 2.7m roller doors are used wherever possible (the industry standard is 2.4m wide).

#### Personnel Doors

Premium personnel doors with welded and powdercoated frames, Colorbond® steel facing, keyed locksets & flashings.

#### Delivery

Delivery can be arranged to almost every area throughout Australia.

## BARNES

### Barns

By adding a fully enclosed, reduced height awning to both sides of a shed, a barn style building can be produced with a 20° roof pitch to the main shed and 10° pitch to the awning. Roof pitches can be varied to suit various needs.

## RURAL SHEDS

## PREMIUM BENEFITS

Our building system is simply superior. In a market too often driven by price, we have gone in a different direction, offering only the best quality Bluescope Lysaght products, heavier brackets & members sizes, more flashing & capping and a full electronic design & production system producing greater accuracy and consistency than other manufacturers are able to offer.

As each of our buildings is accompanied by all the required engineering drawings, floor plans and specifications, as well as a detailed construction manual, the tasks of council submission and building construction are made easy.

So please call one of our consultants to arrange a time to design your new shed or garage!
