To Whom It May Concern,

"Botanical Food Company produces the Gourmet Garden brand of products. Because of the sub-tropical location of our plant, the high humidity environment is ideal for mould spores to grow.

We identified Germ Solutions as a product that would combat mould on non-food contact areas of the production facility.

We started using Germ Solutions in April 2009, and since that time Germ Solutions has reduced the Environmental plate counts, and we can recommend it for similar uses in the food industry, as we no longer have mould build up in areas of the plant which were previously problematic.

Regards,
