

Mining Project Success

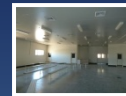

CADIA VALLEY EAST PROJECT A HIT

KAIZEN has completed 2 projects for Newcrest mining in the last 12 months in conjunction with Banksia Building & Fluor. The recent Cadia Valley Change House Muster Room project finished in February 2011 and has proven that Kaizen can perform on large design & construct projects with overwhelming success. While faced with adverse design conditions (-4 to 42 degree temperatures)& strict project safety criteria, Kaizen has delivered & impressed to the extent that we have been signed up as a Newcrest vendor.

ISSUE, MARCH 2011

Features:

Cadia Valley Operation a design & construct hit. Kaizen enters the mining sector with great success.

1

Kaizen has committed to it's service & maintenance division with the addition of two new service technicians

2

VRV Installations on the increase. Kaizen overcame difficult challenges at St George Head Office

3

"Continuous Improvement Through Experience."

The right tools for the job

Kaizen has heavily invested in 5 service vehicles fully equipped for service, maintenance& installations. Learning from the past we have ensured that our clients receive maximum benefit from us investing in tools including balancing & commissioning equipment, equipment lifters & multiple vac pumps & service equipment.

Service Installation & Maintenance In Roads.

In the past 12 Months Kaizen has signed up numerous air conditioning maintenance contracts & views this to be a critical part of providing stability to our projects division

Brent Macduff has now joined the Kaizen team with a vast range of experience & qualifications. Brent who is originally from Sydney has worked for air conditioning companies in Sydney, London & Melbourne & has qualifications in air conditioning, refrigeration & holds & electrical D license

Michael Connolly also joins our team bringing valuable skills to our install department. Michael is a qualified sheet metal

installer & currently at completion stage of his air conditioning refrigeration trade. The addition of Michael & Brent to our team allow Kaizen to carry out installations & small air conditioning fit-outs completely in-house which now reduces costs which Kaizen can pass on to our customer base

Raphael Muller tests one of three new new variable speed drives that were installed at Cadia East to ensure the project complied with section J BCA criteria

Quality Assurance

The testing & inspecting of our sub-contractors works is critical.

We have developed a system at Kaizen to ensure that all works are inspected & signed off. Through a series of newly developed test sign-off sheets, we have found this to be a critical part of sub-contractors management. We need to ensure that our sub-contractors understand that their works will be inspected & must meet a high standard.

VRV Systems: Kaizen In-House Expertise

In 2010 Kaizen installed 3 complete VRV systems with both Mitsubishi or Daikin systems being installed at St George Head Office, Newcrest Laboratory & Red Cross Blood Bank Town Hall House. With the experience to successfully install, commission & maintain VRV systems, Kaizen has become one of the industry leaders in this area.

St George Head Office above was a challenging project as the VRV pipe work had to be installed over numerous levels with the outdoor unit to be craned to the roof.
