*All tanks are nominal sizes and slight variances may occur in actual sizes due to the roto moulding process.

SEE BACK PAGE FOR IMPORTANT DELIVERY + INSTALLATION DETAILS
OUR ROUND WATER TANKS ARE...

**STRONG** - OUR Roof is completely self supporting + requires no center pole

**RELIABLE** - Our horizontal seam is positioned around the top of the wall, where there is 'little to no load' on the seam to dramatically reduce the risk of the tank splitting.

**NON TOXIC** + **TASTE FREE UV STABILISED**

**MANUFACTURED USING ONLY FOOD GRADE POLYETHYLENE WITH AUSTRALIAN MADE POWDER TO AUS NZ 4766 - 2006 STANDARDS**

**MADE WITH SOLID THICK WALL CONSTRUCTION**

**DELIVERED AS AN INTEGRAL ONE PIECE MOULD - WE DO NOT CUT THE ROOF OFF OUR TANKS FOR ANY REASON**

---

*In the unlikely event a problem arises due to a manufacturing defect, please contact the authorised dealer where you purchased your tank. If your tank cannot be repaired by our dealer or Kilkee, Kilkee will replace the tank.*
SLIMLINE TANK - 1000L

DIMENSIONS
- HEIGHT: 1770mm
- DEPTH: 620mm
- WIDTH: 1225mm

STANDARD FITTINGS INCLUDE
- OUTLET: 25mm (1")
- BALL VALVE: 25mm (1")
- OVERFLOW: 90mm
- MESH SCREEN: 300mm over the manhole

DRAIN FROM BALLAST TANK: 50mm (2")

COLOUR RANGE*

BEIGE  MIST GREEN

*Colours are example only and may vary slightly. We use all Colorbond® colours.
DELIVERY

Kilkee Delivers To:
- South Australia
- New South Wales (selected areas)
- Victoria (selected areas)

We do our best to keep delivery times as short as possible but will notify you if there will be any delays. Once your order is placed, you will receive notice (1-2 days) before delivery of your tank. If you require a longer notice period or if the tank is not immediately required, please advise Kilkee during processing so special arrangements can be made.

DELIVERY INSTRUCTIONS

OFF ROAD LOCATIONS
If the delivery point is off-road, you must inform Kilkee so the appropriate vehicle for the drop can be organised. For delivery around the Adelaide local and hill areas, we have a 6-wheel drive vehicle to access some of the more difficult terrain.

ENVIRONMENTAL CONDITIONS
If the ground is soft or too wet, Kilkee must be notified prior to delivery so alternate plans can be made.

DELIVERY MANPOWER

3,300L - 11,500L TANK = 1 PERSON + DRIVER
When delivering a 3,300L-11,500L tank, our driver will require help from one other able-bodied person.

22,500L + 24,000L TANK = 3 PERSONS + DRIVER
As the tanks are heavy, the larger 22,500L and 24,000L tanks will require the help of 3 able-bodied people plus the driver for positioning of the tank onto your pre-prepared pad.

SITE PREPARATION (PRIOR TO DELIVERY)

When preparing the site for your new tank, please ensure the area you have selected is suitable. The area must be accessible for the truck to either:
- Off-load the tank directly onto the site, or
- By off-loading the tank from the truck and rolling a short distance into position (without damage to the tank).

As our truck can be up to 19 m long, 3.6 m wide and 4.2 m high, please ensure the truck has clear access. Any obstacles need to be cleared by cutting back branches prior to delivery.

AFTER DELIVERY

Please ensure that your new kilkee tank is secured immediately following delivery. It can be tied down using rope or wire or water can be added as a ballast.

INSTALLATION

PLUMBING

OUTLET PIPES
In all installations, make sure outlet pipes are well supported and not reliant on the tank walls for stability.

STANDS
With tanks on stands, pipes should be supported by the stand, not the tank.

SAND BASE
A 100mm bed of packing sand is a suitable base. Ensure that the sand is 100mm wider than the diameter of the tank and that the sand cannot be eroded from under the tank, i.e. direct overflow away from the tank.

BURRING YOUR TANK

Your tank can be buried by up to a meter, but it will require:
- A 200mm sand base and
- 200mm of sand around the sides for protection (from rocks and other debris that might be damaging).

The effects of ground water and its ability to push things out is the ground must be considered if burying your tank. Kilkee recommends that you seek the advice of an engineer who will guide you to ensure the longevity and safety of your tank.

When burying your tank, it is imperative that you plumb the overflow water away from your tank, so that you do not add the ground water or undermine the tank.

Kilkee will not be held liable for any damage that may occur to the tank being pushed out of the ground.

OVERFLOW + OUTLET POSITION

Please consider at which point you would like your overflow and outlet positioned (noting position 12 is the inlet).
