

Air Conditioner Protection

Over time an air conditioners condenser coil can become blocked and metals can break-down and corrode due to- salty air, acidic rain, pollutants ect, this effects the efficiency and effectiveness of the system, good maintenance and TEMPMASTERS "Coil Clean Treatment" & "Protective Coil Coating" will help to...

- * Increase the life of you're A/C
- * Reduce running cost
- * Less Power Consumption
- * Reduce heat-load on compressor
- * Better Thermal transfer

Stage 1

Before treatment

Preparation of condensing unit to stop the break down of the aluminium fins increasing life expectancy.

Stage 2

Clean and Pre-Treat

A non-toxic Food grade foaming cleaner and pre treater is applied to the coil to remove any Dirt, Dust and Debris that has built up over time, allowing Air to flow through coil like NEW.

Stage 3

Protective Treatment

Application of Protective treatment coating to prolong coil life and reduce the break-down aluminium coils.

Only- \$280 For 1x Full 'pre-clean Treatment' and 'Protective coil coat' Including Full service and performance check.
Additional units \$160.

(Local and residential areas only)
