

Great News!

Full CMS Now Available

That's good news for you

SEO

CMS (Content Management Systems) give you, the website owner, the ability to update the content of your site directly through an online dashboard.

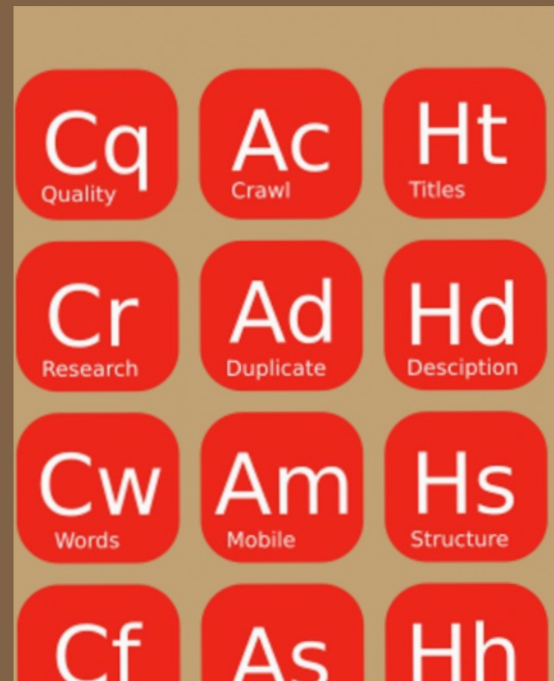

Through CMS you will be able to change the images and the wording of your website.

For the technically savvy, you will be able add more pages and other applications to your website through the hosting companies online dashboard.

Domain registration and hosting is needed to fully utilise the CMS system. These can both be set up for you by us.

You will be responsible for the cost of domain registration and website hosting. These costs are simply passed on to you without any mark-up by Squirrel Web Design And Graphics. If you prefer you can do those yourself and pass on the necessary details to us.

If you are a little unsure about using CMS we can set up a site for you that has your content that can be updated for you at a very economical rate.

Let's talk layouts

What about images and graphics format?

We can use images and graphics in any format you care to supply. From common popular ones like JPG and PNG through to Photoshop and svg files, all optimised for the web.

Options for layouts are things such as:

- Menu above or below header?
- Page content overlapped by header or emerging from header?
- One, two or three columns?
- Placement of images.
- Is the background a patterned one, one colour, or it an image?
- Are there any mouse-over effects?

SEO What is it?

It is designed to aid the ranking of a page or site. There are many factors involved, such as the type of text used, *not just what is written.*

Well over 35 factors in fact. From the way the site is designed to how the visitor uses the site.
