

## FLY SCREENS AND FLY SCREEN DOORS

If security is not your priority and flies, mosquitoes, midges and insects that are attracted by light are your problem then installing a conventional flyscreen may be all you need to enjoy fresh natural breezes without the worry of insects. Our professional team can install fly screens to all window types and offer an on-site service re-meshing or repairing damage and worn screens. Whether you have a new or older home we are confident we have a flyscreen solution to suit. For the DIY minded you can bring your screens to us and we can re-mesh or repair your screens in our factory, saving on site labour and installation costs.

## TRUE VALUE REFURBISHMENT

If you're tired of looking at that old dirty Diamond grille security door that gives you the feeling of being in jail or just want a cost effective solution to improve the look and security to your home then re-vitalising your existing screen or security door could be the answer.

In just one visit, True Value Screens can transform your old diamond grille door with perforated Aluminium sheet or Stainless Steel mesh. Perforated Aluminium sheet is virtually transparent keeping intruders out and letting light and air flow in. Refurbishing with perforated Aluminium sheet is a cost effective alternative to purchasing a new Stainless Steel security. You will be surprised on how cost effective refurbishing can be, you can save hundreds of dollars over that of a new screen and in just one convenient visit. If it's a fresh modern look you are after without the big price tag of buying a new security door, then refurbishing with Trueguard aluminium sheet is the perfect solution.

## REPAIRS AND SERVICE

Most items around the home require regular maintenance this includes windows and doors. Contrary to popular belief, windows and doors need regular maintenance and servicing as parts don't last forever. All too often home owners seem to put up with windows and doors that are difficult to slide or simply just don't operate correctly. Our aftermarket window and door service team can fit new screen door rollers, replace broken locks and rollers to patio doors. We fit window locks, install door closers, pet doors and safety latches. Worn out door tracks can be another reason for doors not sliding especially on older patio doors. In many cases it is possible to replace the existing door track with an aftermarket track that will have the old sliding door gliding like new, which can save thousands over that of installing a new door.

## STAINLESS STEEL MESH SCREENS

### TRUEMESH® STAINLESS STEEL BARRIER DOOR

There is no better deterrent for would be intruders than a visual barrier especially a security door or screen made of stainless steel mesh. Truemesh Stainless Steel barrier doors and screens are constructed using marine-grade stainless steel mesh which is secured to the aluminium frame using a unique metal wedge and riveting system. This combination of materials and fixing technique provides an elegant and secure barrier keeping intruders and insects out without the price tag of big name brands. The 316 grade stainless steel mesh and robust aluminium frame offers superior strength and corrosion resistance over that of conventional screens.

Optional aluminium sub frames and triple point locking can be installed as an increased deterrent to would be intruders. This visual barrier not only minimises the likelihood of forced entry, it is stylish, modern, easy to maintain and adds value and security.

## ALUMINIUM BARRIER SCREENS

### TRUEGUARD® PERFORATED ALUMINIUM DOOR

Trueguard® is a unique barrier door system that uses perforated Aluminium sheet instead of stainless steel mesh. The perforations are small enough to keep insects out, big enough to allow excellent airflow and transparency. Trueguard is constructed by inserting perforated Aluminium sheet into the door frame using rivets and special spacers that support the perforated aluminium sheet.

The Trueguard security screen provides superior strength and resistance to corrosion over that of Stainless Steel or Diamond grille screens. The 2mm thick perforated aluminium is powder coated, easy to clean and strong. Trueguard's extreme corrosion resistance makes the perforated Aluminium security door ideal for coastal properties. Installing perforated aluminium sheet is an ideal solution for updating existing fly screen doors or diamond grille security doors. By installing a perforated sheet barrier door you will save hundreds of dollars over that of a new stainless steel door.

## DIAMOND GRILLE SECURITY SCREENS

### TRUEGUARD® PERFORATED ALUMINIUM DOOR

Diamond Grille Screens: This cost effective security screen has provided protection to thousands of Australian homes for more than 30 years. The popularity of this screen is mainly due to its relatively cheap price compared to that of other security and barrier door options. The diamond grille's strength comes from its distinctive expanded diamond mesh pattern. The 7mm thick expanded mesh grille is inserted into an aluminium frame and flyscreen mesh is attached to keep insects out. The diamond grille is then riveted at regular spacing around the entire frame for added strength.

Diamond Grille doors can also be fitted with Pet Mesh. Pet Mesh is a wire mesh fine enough to keep bugs out, yet strong enough to handle pets jumping up against it. One way or privacy mesh can also be installed into the Diamond Grille security door. One-way mesh is designed to create a bit more privacy. The design makes it difficult to see in from the outside, however, it's easy to see out.
