Hanson Imagecrete®

Imagecrete® decorative concrete adds colour and texture to commercial and residential projects both inside and out. For your large projects with specific requirements, contact your local Hanson representative and ask about our customised design service.

03

The Imagecrete® range

Xposemasta® Decorative aggregates in concrete

IvoryX™ Decorative aggregates in off-white concrete

SpectrumX® Decorative aggregates in full depth coloured concrete

Terracrete® Honed terrazzo-like concrete

Kolormasta® Full depth coloured concrete

Just as housing styles vary from state to state and area to area, the aggregates used in the production of the Hanson decorative concrete range are subject to regional variations.

Aggregates used in decorative concrete are products of nature and may contain ironstone that could cause staining. Therefore, the colours represented in this brochure are indicative and regional only. We suggest sighting products first hand before ordering.

Xposemasta®

Decorative aggregates in concrete

06

Xposemasta®

Xposemasta® reveals the texture of nature with a choice of designer exposed aggregates set in concrete. The aggregate exposure can be heavy or light depending on your desire for look and surface texture (light exposure creates a smoother more bare-foot friendly surface).

Xposemasta® is a hard wearing, affordable, visually striking surface that marries beautifully with contemporary and traditional landscaping designs. It's the perfect finish for commercial and residential applications including pool-sides, driveways, pathways and outdoor entertainment areas.

IvoryX™

IvoryX™ has an understated elegance to enhance any contemporary or traditional landscape design. The designer aggregates are simply beautiful and available in a choice of colours and textures. In consultation with your contractor, you have a choice of heavy or light exposure depending on the style and design of your project.

Contact Hanson before ordering/specifying these products.

SpectrumX[®]

Decorative aggregates in full depth coloured concrete

08

SpectrumX[®]

SpectrumX[®] gives you the option to choose from different aggregates and concrete colours. You can specify whether the designer aggregates are exposed to a heavy or light finish to create a unique effect in colour and texture to compliment your project design.

Terracrete®

The latest fashion is honed and sealed concrete flooring in indoor areas that spill outdoors. Terracrete® gives you a stylish minimalist look in a wide variety of aggregate and concrete colour options, opening up a range of free flowing design possibilities. With the beauty and colour of polished stone combined with the practicality of concrete, Terracrete® enhances any design inside and out.

Before you begin

Important information for designers, home owners & concrete contractors.

Give sufficient notice when ordering To ensure availability of your chosen decorative concrete product a minimum notice period applies.

Notify order taker of total job requirement If your project is to be completed over an extended period of time, notify the order taker of the likely time period, and the total project requirement at the time of placing the first order.

Use reputable concretors and finishers To ensure that your project looks the way you want it to, Hanson recommends that only reputable concretors be used to place and finish the Imagecrete® decorative concrete range. You may want to request an onsite test panel be placed by your concretor to ensure you both agree on the desired finish.

Don't add water Hanson's decorative concrete range has been specially designed to achieve a unique look. Any addition of water to the concrete once it has arrived on site may result in an unsatisfactory finish and will reduce the strength of your concrete.

Protect your finished job Hanson recommends that your new decorative concrete be adequately cured and an appropriate surface treatment be applied to keep it looking good year after year. For maximum effect, we recommend that surface treatments be re-applied periodically as per the manufacturers' specification.

Care when using surface sealers Whilst Hanson recommends the use of sealers on the Imagecrete® range, care must be taken to test the sealer first for possible effects to the colour and gloss of the surface. Hanson recommends that before a sealer is applied to the whole project, a small section should be trialled first with the sealer to ensure the resultant surface meets your requirements after a sealer has been applied.

Colour variation Aggregates used in Kolormasta®, Xposemasta®, IvoryX™, SpectrumX® and Terracrete® are products of nature and can vary in quality, colour tone, shape, texture and impurities. All brochures, images, samples and other projects are indicative only of the final colour and texture achieved. These variations can also change the shade of the concrete matrix.

Concrete joints Ensure jointing is well designed to minimise the chance of cracking and also to compliment your design.

Placement Any sample of aggregate or finished product shown to you is only indicative and illustrative of the type of finish to be achieved and no guarantee is given that the finished product will conform with this sample.

Xposemasta®, IvoryX™, SpectrumX® and Terracrete® are designed to achieve a successful exposed aggregate finish. It is not recommended to place these products via a concrete pump. Hanson gives no guarantee of pumpability.

Hanson will not be responsible for poor workmanship, the addition of water or other products, or the use of a sugar solution as a surface retarder for aggregate exposure.

The process of exposing the aggregate in fresh concrete can generate wash-off water that has a high cement content. All wash water must be recovered and disposed of in an environmentally responsible manner. Under no circumstances should this water be allowed to enter any drainage system or natural waterway.

Although every effort is made to ensure aggregates are free from foreign material or inconsistencies, aggregates are a product of nature, they contain ironstone which could cause staining.

Just as housing styles vary from state to state and area to area, the aggregates used in the production of Hanson decorative concrete ranges are subject to regional variations. Therefore the colours represented in this brochure are indicative and regional only. We suggest sighting products first hand before ordering.

For further advice, talk to your local Hanson representative.

Please consult your local Hanson representative for information on colour ranges and the availability of products.

we'll make it happen

In Australia, Hanson employs more than 3,600 staff and permanent contractors across more than 60 quarries, 240 concrete plants and a network of precast and masonry product sites. With global strength, national coverage and local presence, Hanson has a proud history of getting the job done.

Our commitment is to be the most reliable and most responsible supplier, with the best team whilst offering the best customer focus.

Our product range includes aggregates, concrete, masonry and precast concrete products, so if you need an innovative solution, we'll make it happen.
