

# COMPANY PROFILE

## Mission Statement

N.E Power Solutions Pty Ltd is an Electrical contractor based on the southside of Brisbane. We have always taken pride in offering value added solutions to our customers. By using quality electrical components, and operating with the philosophy that each job is unique no matter how similar it may appear to previous jobs, we can truly offer our clients a tailored special service. We know and appreciate the trust that our clients give us and in return we offer them clear understanding of the work undertaken, continued communication throughout the process and leave them with a solution that our staff would be truly happy and proud to be associated with.

## Industry Associations & Memberships

We are proud to have membership with the Master Electricians. This membership puts us amongst the industry leaders, and allows us to collaborate and draw from the most experienced individuals within the Electrical industry. In addition to our membership with the Master Electricians, we have implemented a comprehensive safety compliance system, which requires N.E Power Solutions to perform and complete its' work at the highest level of safety, ensuring its staff, our clients and the public remain safe now and in the future.

Our experience stretches beyond simple electrical services. Our technicians also have extensive experience in data systems, both Copper and Fiber optic, and have worked in some of the Australia's largest and more secure data centres. To provide total and seamless data solutions to our clients, we involve our IT partners in the early stages of the project, to ensure what is provided is indeed the right solution.

As technology advances forward, we are always looking at how these new developments can benefit our clients and improve their environment. We are investigating how we can improve commercial lighting systems currently within our client's premises, offering savings in operating costs and maintenance expenses.

## Services Provided

We provide electrical and data solutions within a number of environments, from domestic customers to large scale commercial clients. Some of the services we offer are:

- Intelligent lighting systems (Residential and Commercial)
- Lighting design and Installation
- Domestic Maintenance (Power point and lighting repairs)
- Switchboard Auditing and Safety Inspections (Safety Switch testing and Switchboard Upgrades)
- Structured data cabling (Copper and Fiber)
- Asset Testing and Routine Lighting reports (Test and Tag, Emergency Lighting)
- Preventative Maintenance (Commercial Light Relamping)
- Customised solutions based on clients specific requirements

## Product Range

N.E Power Solutions made a critical choice early on in its conception that what the client touches, sees and interacts with will determine how they judge our finished product. From this choice, we've made the determination that the products we install must be of the highest quality, reflect value for money and benefit the environment and local community. As such, we source and prefer to use local Australian made products where they fit best, while at the same time these products must offer time proven reliability. That's why we have chosen to proudly use some of the following brands.
