THE MUSHROOM EXTRACT THAT SUPPORTS YOUR IMMUNE SYSTEM

PSK Trammune® is a unique product which contains a medicinal mushroom extract from an ancient healing mushroom that has been used throughout the world to help protect and build the body's inner health & wellbeing. This mushroom is called *Trametes versicolor* also known as; *Coriolus versicolor*, Yun Zhi, Kawaratake or Turkey Tail.

Trammune® contains the active ingredient PSK or Polysaccharide-K which is the immunotherapeutic extract derived from this medicinal mushroom *Trametes versicolor*. Polysaccharide-K is part of a class of Immunomodulators known as 'biological response modifiers' which stimulate the body's immune function. PSK's ability to enhance cellular immune function and stimulate the immune system helps the body maintain correct balance between cellular & humoral immunity.

PSK is commercially extracted from the mycelial walls of the mushroom with the active constituent being a proteoglycan concentrate containing different monosaccharides (sugar-like molecules) bound to a core protein. It is this very complex structure that confers the medicinal benefits of PSK.

Trammune® brand of PSK is an Australian made and owned product which is listed with the TGA (the governing body for Pharmaceuticals in Australia) – AUST L 128882. By using the strict mandatory testing specifications set down by the TGA, and a sophisticated analytical "fingerprint" method established by respected doctors from a Sydney University, customers can be assured that every batch of Trammune® offers quality, purity, potency and consistency.

Trammune® is available in a bottle of 90 capsules with each capsule containing 500mg *Trametes versicolor* proteoglycan concentrate. The concentrated pure extract provides a more consistent amount of active ingredient and should not be confused with the amount of raw mushroom from which the extract is derived. Each bottle is secured with two safety seals.

DOSAGE: As with most health supplements, it is suggested that Trammune® be taken on a regular basis. The recommended dosage is 3 (maintenance dose) to 6 (therapeutic dose) capsules per day taken 2-3 times a day or as prescribed by your Healthcare practitioner. The capsules are best taken at least 30 minutes prior to food unless you have a sensitive stomach then we suggest it be taken with food.

There have been no reported drug interactions and no reported adverse reactions with the use of PSK.

PSK Trammune is Proudly Australian Made & Owned
