

## Sliding Gates

Sliding Gates are becoming increasingly popular and are particularly beneficial where space is not available for a swing gate. Our gate motors are **double the speed** of most other motors on the market. With a range of safety features and customizable settings, you can easily program your gate motor to operate just the way you like it. Imagine not having the hassle of leaving your vehicle to open and close the gate.

## Swing Gates

In some instances swing gates are more suitable where the space excludes the use of a sliding gate. Swing gate motors come in both a linear and rotary option, suiting all makes and models of swing gates. They are highly reliable, super-fast speeds and come with a range of features.

## GSM Devices

With the G Switch you can easily open and close your gate, switch on security lights or operate other electrical equipment, all by using your mobile phone! So easy and convenient. The latest in access control technology.

## Solar Panels

Systems can be connected to mains power or powered by dedicated solar panels. All our motors come with a battery back-up in the event of a power outage, making them unmatched in terms of reliability.

**Access Intercom Automation** use Centsys systems - they are the best in the industry. Our qualified technician can repair existing systems or supply and install new systems (free quotes are part of the service for all new installations). All automatic gates come with warranties on the motor and on remotes. We can also create and deliver DIY kits tailored to suit your needs. Call our friendly team to discuss your needs.
