- Sign remotely from anywhere, anytime
- Promotes a **green** environment

Secured Signing Service

The Secured Signing solution is a WEB Application, Software as a Service (SaaS) that allows businesses of all sizes to securely sign documents online.

This secure signing online service is based on Secured Digital Signatures (PKI) technology. The solution provides a unique key to each user for signing seal the document.

A user simply adds a document to the system, signs it digitally, invites a third party to sign (including a witness) if required, and sends it to the parties involved. If the document is modified, signatures immediately become invalid. Anyone who participated in the signing process or has received the signed document is able to verify signature (s) on their desktop or by using the Secured Signing free Online Verification Service.
