

PROTECT YOUR WARRANTY!

Dirty Solar Panels can lose up to 50% efficiency.

Give your system the cleaning it deserves...

Don't lose up to 50% of your power by not cleaning your solar panels!

Solar Panels have to be washed thoroughly once or twice a year minimum, to **maximize peak performance** with a specialised soft bristle brush ensuring only 100% purified water is used to remove the dirty layer of deposits. Tap water known as hard water will leave Calcium and other very nasty stains on the surface permanently, similar to the stained glass in your shower recess. *We highly recommend not to use tap water to clean your Solar Panels.*

Waiting for rain to clean your Solar Panels will not clean and remove the dirty layer of residue build up that inherits the glass surface, rain will only remove fine films of dust.

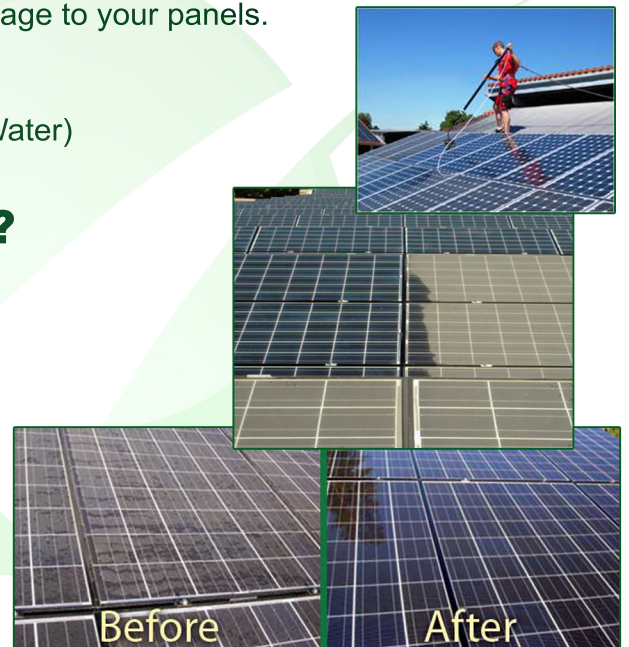

Our unique cleaning system uses the most advanced technology available.

Our purpose built mobile unit produces its own **100% purified water** (Reverse Osmosis/Deionized Water). Using purified water is necessary as cleaning with untreated hard water will leave spots containing mineral deposits which will limit your panels output. The treated water is then fed through a telescopic reach and wash pole. This specifically designed pole has a **scratch free brush** ensuring a crystal clear result every time without the worry of any damage to your panels.

- 100% environmentally friendly
- No chemicals/ detergents
- 100% purified water (Reverse Osmosis/Deionized Water)

WHY CLEAN YOUR SOLAR PANELS?

- Dirt and dust
- Smog and ash
- Moss and fungus
- Saps, pollens and debris from trees
- Bird and animal droppings
