SERVICING MACKAY & REGION SINCE 2004

## ACTIVATED CARBON FILTRATION SYSTEM

Coconut Shell Activated Carbon removes impurities from water utilising a process of chemical adsorption. Activated carbon has a slight electro-positive charge to it. As water passes over the positively charged carbon surface the negative ions of the contaminants are drawn to the surface of the carbon granules.

Carbon is extremely effective in removing chlorine, volatile organic compounds (VOC), herbicides and pesticides, blue green algae, organic sediments, rust, mud, slime, sand, as well as trihalomethane (THM) compounds found in tap water. The ceramic plate at the bottom serves as a final filter and also removes most bacteria that might be present in the water. Bio Ceramic Infra Red Balls add trace elements of calcium, magnesium, zinc, iodine, iron, potassium and adjusts the water to an optimum mild alkaline level as well as energising the water molecules.
