

# Owner Builder?

Did you know current Australian Building Code standards stipulate that preventative measures against termite infestation must

be incorporated during the construction of new buildings or extensions, this is called Pre-Treatment, and is in the form of a

chemical barrier which is installed prior to concreting. The second stage involves spraying the perimeter of your house (whilst under construction) with another chemical barrier.

Call **Steve** at **BD Pre-Treat Services**  
to arrange a quote  
and protect your investment.
