

## **FAQ**

### **How often should I get it done?**

The general pest treatments covering cockroaches, ants and spiders are commonly done every 12 months with a termite inspection done every 6-12 months.

### **Is there a warranty?**

Expert pest professionals should guarantee their work with the appropriate warranties.

### **Do I have to clean out my kitchen cupboards?**

There is no need to remove anything or clear out your kitchen cupboards. The treatment is applied in areas that will not contaminate your goods.

### **Is it safe?**

Most products used today are registered to be environmentally friendly, biodegradable and safe to use around humans and animals. However, it is still recommended to always cover your birds and fish during treatments.

The pest control treatments can be applied while you are in the house. Professional pest controllers will work around you.

### **How much is it?**

The use of this quoting service is free. The quote you receive from a professional pest expert will depend on the service that you may require and the size of the job.
