Commercial cleaning products are full of harmful chemicals. But there are natural alternatives that are just as effective.

Green cleaning is not only good for the environment; it increases workplace health and safety. Many commonly used cleaning products contain toxic ingredients that emit fumes or leave residues that can irritate our skin, eyes, noses, lungs and cause headaches, dizziness and fatigue.

Switching to a green cleaning service provides health benefits for your staff and customers, especially those with asthma, allergies, respiratory conditions, eczema and/or sensitive skin.

A healthier workplace can lead to fewer employee sick days and increased productivity.

A safer, healthier cleaning solution for your business

Green cleaning is more than just chemical substitution. Eco Natural™ offers a complete cleaning, recycling and waste reduction program using ecologically responsible cleaning equipment, products and techniques to improve indoor air quality and protect health, natural resources and the environment.

Your premises will be professionally and hygienically cleaned by our 'green clean' team with low allergenic, non-toxic, biodegradable cleaning agents; HEPA® micro filtered vacuum cleaners; and microfibre cloths and mops that pick up dust like a magnet!

The use of recycled, unbleached paper supplies also plays an important role as part of a waste reduction strategy to lessen our impact on the environment.

Eco Natural™ is currently servicing Adelaide's southern suburbs with plans for further expansion.
